Chicago Hospital Shooting **From a Conversational Lunch to Reality** ***Soup to Nutjobs...***

Lunch on Monday, November 19th, 2018 was a normal discussion day with a major hospital client/executive covering ongoing business and the subject matter of hospital security. Stating that society was falling apart with violence, people taking their pent-up issues to public venues, such as hospitals, casinos, places of work, other's workplaces where they have a grudge or an ex. Then violently acting with the aggression of which we are daily seeing the deadly results.

Once we called them '**soft targets**', today they are '**hard targets**', direct and demands new levels of security. The liability of doing nothing is a reality in this litigious society.

It is all about access and communications, too much free uncontrolled access and more than limited communications. Sure, security staff and police have radios, they do not communicate directly with each other due to compatibility issues and there lies a major security issue. Radios do not send images of the suspect or document the thread of the situation. In today's age, audible communications are archaic, out of touch and out of date. Yes, **First Net** has been announced but is not here yet and who knows what it will really be like. Surely someone, somewhere has had better thoughts of improvement? Of course, they do!

Not just created, but proven and successfully working!

LENS, Law Enforcement Network Sharing Solution platform, it is the only solid investigative alert or BOLO platform and much, much more, available globally. Utilizing the Smartphone with cloud-based access on any Smartphone, leaving no information behind or accessible by hackers. It is a CJIS complaint platform and complies with all stipulations, including crossing all borders, connecting all agencies and importantly, affordability.

A doctor, a newly graduated pharmacist, and a police officer were killed after a gunman opened fire at a hospital in Chicago, police say.

The gunman was seen arguing with the doctor, Tamara O'Neal, who he had been in a relationship with, before shooting her and turning his gun on others as he ran inside the hospital.

The shootings began with a row in the Mercy Hospital car park between the gunman and Dr. O'Neal at about 15:00 local time (21:00 GMT) on Monday.

When a friend of the doctor's tried to intervene "the offender lifted up his shirt and displayed a handgun". Chicago Police Superintendent Eddie Johnson said.

As the friend ran for help, gunfire broke out, according to the Associated Press. One witness, James Gray, told reporters he saw Dr. O'Neal fall to the ground and then the gunman "stood over her and shot her three more times".

When police arrived, the gunman then moved into the hospital, shooting at random and killing pharmacist Dayna Less who was getting off an escalator at the time.

In an exchange of fire with the gunman, police officer Samuel Jimenez was killed. A second police officer avoided injury after a bullet fired in his direction became lodged in his gun in his holster.

The shooter, who has not been named, also died but it is not clear if he was killed by police or took his own life.

We cannot continue with the complacency factor or the political correctness of lax security which is proving deadly. It is not **IF**, it will happen, it's **WHEN!** You are seeing in the headlines, news reports on television and the Internet. It is the responsibility of all in the corporate world who have 'open doors' allowing all to enter to do their business, this cannot continue as is.

Those corporations that do have access control on all that wish to enter, you have no true BOLO communications to control the situations with a direct connection to your management or the responding law enforcement. The timing of communications is not an issue, we connect in under thirty (30) seconds, including photographs to all who are administratively granted access.

LENSS is the Communication Change...

WE ARE IN THE NOW & KEEP YOU; IN THE KNOW...
