

The Triangulation of Digital Policing & Crime Fighting

Why you must be using **LENS** (Law Enforcement Sharing Solution) from now on.

If the truth be known and it should be, our crime fighting is not doing that well. Criminally and socially we are in a dire war, a changing war that continues to be compromised by budget cuts and the societal chameleon effect that is being raged by angry Fingers & Thumbs, plus the criminal's knowledge of how far behind law enforcement really is.

Argumentative is not just a word it is a viral trait that is changing the face of the nation and global stability. No

one it seems is happy with their job, co-workers, family, friends and far less happy regarding government with what they perceive is a failure.

It is a true "**Them & Us**" Syndrome!

CommSmart Global Group, a LexisNexis Risk Solutions Partner has four decades plus of *Street Smart* law enforcement and computer/cyber experience. Living/working through the social changes within communities and how they have been policed.

Standard Operating Procedures are not set in stone anymore, there has to be a forthright fluidity available. In fact, it is on a day by day or even, hour by hour basis that changes are occurring. To top it all, you are constantly informed of the reduction in budget and manpower whilst crime on all levels rises.

The expectation of the social magic wand is ill-conceived or is it?

Not one community, city, county, or state is exempt from this massive issue. Rich, poor or forgotten the concerns are echoed among us all. As time slips by it is has only gotten worse, as the inner analog battle is falling on hearing impaired ears and dampened visionary eyes.

Frustration is an understatement! We hear and feel it every single day in our meetings globally with law enforcement agencies and government officials. If it is not within a meeting, it is on the news, Internet, and water cooler conversations.

Our passion and persistence are not going to allow it to fester any longer. Our life work has been proving that our solutions work and make change for all.

It is the people, the people you pass by each and every day, you live amongst, with whom your children go to school and you and your family socialize with.

The heart of any true success is having the right information at your fingertips at all times. This is the enabler for proactive decision making and has been here in one form or another since time began. Now it is truly the crime-fighting changer!

Today it is a digital age unless you have been tucked away in the *Amazon* forest and never been touched or bombarded with media stories. This is where we conversationally can guide you in how all of the collected information or data can be of immense use in the ability to solve the crime.

Seriously, it is no good collecting data, sending directly to data silo, only to be locked away for months and years to be reviewed after the fact. Statistics do not solve crimes or have any predictability capabilities unless they are placed in the hands of those who have the experience to utilize in a productive manner.

CommSmart Global Group and especially with our partners have successfully collected over 65 billion of public records which increase daily by more millions, through concise analytical software and proprietary algorithms which enable cost/time effective direct information to be used in crime solving successfully.

Add this to the local, state and national crime information then we are beginning to form two sides of the triangulation to have precise 'real' information.

The third side is even more intriguing, **LENSS (Law Enforcement Sharing Solution)**. It is now a stronger search engine format than you have ever seen or touched!

Everything you require is encapsulated within **LENSS, DMV, NCIC, HIDTA, Safety Net, LPR, PNC, CRIMINT, Accurint local crime and public data with any other databases you wish to add**. As you action your normal verification process via **LENSS**, it accesses all these steps on one screen, smartphone, laptop, PC Desk it works with all.

Within one operation, no additional programs to use, no more retyping names, vehicles tag or other vital information, right in the palm of the hand and at the fingertips.

It is the additional information that is the key, every report and officer's notes are matched in real-time and alert the officer of every interaction the individual has had with law enforcement, from traffic stops to infractions, with important detail from the notes which will be compared and matched.

Checkboxes cannot do that. The simple visual ability, comments, location, associates are brought right to you. Preparing you for the true statements which have previously been stated. This is ensuring your safety as to who you really are encountering.

Adoption by HIDTA & Safety Net would radically make more sense and increase the arrests and the safety of all officers, not just the Narcotics Task Forces, but also every officer who is stopping individuals, either by traffic stops and calls for service.

The Digital Policing Triangulation that has been developed is tied to what we call "**Atmospherics**", the information that is floating around us each and every second. Likened to looking at a window with sunlight pouring in and seeing the particles in motion. That is what we capture, analyze, giving those that require the tools to complete the task.

LENSS works in this simple manner, local crime data is collected by the agency, placed within the system for all to have access to. Denoting it is borderless, it has no barriers for agencies with cybersecurity for all. Neighboring counties, cities, states and all agencies can share information which once was hidden, even if crimes happen just over county border, today all is revealed.

LENSS

Law Enforcement Network Sharing Solution
BY PERCEPTIVE INTELLIGENCE
"Every Officer should know what other Officers know"

It not only looks at the criminal information, at the same time the ability to review and match all officer denoted information within their notes is analyzed, matched, reviewed and included in any information that is accessed, meaning the ability to hide is diminished. It will even share with your backup teams and management.

We believe that this is not just a local issue, it must be approached from a national and statewide perspective, which would act as a blanket coverage of all. The majority of states have pockets of crime which adhere to major cities. Those are looked at by small cities on the perceived possibilities of increases and it can be proactively reviewed.

We are looking at the core criminal hotspots which when interlinked via our capabilities reduces overall crime, increases community trust, and respect and produces a far more harmonious presence.

What is so important is the fact that every single officer that has encountered your suspect is now informed instantaneously via email or SMS text that you are inquiring about on this person or situation. Will even inform your backup units who now have the same information report thread, so they are not coming in blind.

Not having current and up-to-date information in law enforcement is a killer! Knowledge of what you are walking into for a 'call for service' has never been so vital in our increasingly violent society. Police officers are

frontline and are called upon to resolve and solve individual's businesses and community's issues in regard to criminal acts or disputes.

Here is the issue, law enforcement databases, all, in fact, local department, county, state, and Federal are so disjointed, disconnected, not shared and hidden in data silos, which is costing an inordinate amount of time, depleting the reduced budget, increasing frustration and placing officer safety at an even deeper risk. Most departments have such outdated computer technology and hardware, they don't have the budget for necessary upgrades.

The 18,000+ law enforcement agencies in America and the 43 main police constabularies, plus lesser known smaller agencies within the United Kingdom are all going in different directions trying catch up with technology which will advance crime solving. Having a myriad of mobile apps and individual forces spending and wasting their exhausted budgets on technology research and not being on the same page is not going to solve the compounding issue.
