## Smart Policing Returns to Front & Center

*Real-Time Collected Data from Street Level Officers is the Key!*

No one ever said policing a society was easy. Indeed, Sir Robert Peel back in 1829 knew what was necessary. Anyone who dedicates their personal life and career to public service knows that it can be a **'thankless'** job. Today, policing has a target on its back and criminals are using the civil unrest globally to cause mayhem and sadly death. Actions required are right in front of our eyes and ears if only we had a method to make the change, we do!

Those that are dedicated to *fighting the good fight*, as that is what it is. Society has changed, even in my lifetime and is a continuum of concern. The killing of police officers in the USA is out of control but is being roped in by better use of intelligence gathering. It takes time and a concerted effort of all police officers, both the **'boots on the ground'** and senior management.

It is all about the gathering of information from every nook and cranny, each traffic stop, call for service, every encounter with members of the public and understanding that each answer derived from the questions is essential in some fashion and must not be ignored or brushed aside.

Being a **'Checkbox Charlie'** with forms helps no one. Missed, under-reported comments and failed notation is not protecting you, your fellow officers or the public. Comments, situations, and facts that are going missing from a report are a concern. It might not be relevant to the case at hand, but down the road, it could be a major factor. It is all about awareness, being mindful and smart in listening, absorbing the situation and smartly documenting with **'Smart Words,'** which are concise and meaningful.

All police officers, Sheriff's deputies are trained to a standard, a standard that has evolved over the decades and not necessarily keeping pace with current societal presence. Every single law enforcement officer is an individual and works or performs at their speed and level.

Law Enforcement Network Sharing Solution

Some and you know them well, doing the bare minimum and are the weak link in the chain. Policing today is not acceptable today; it must and will be changed. It is a fundamental factor that smart policing is a team effort for all of us to continue the mantra of '**Protect & Serve.**'

As former law enforcement, we fully understand what is necessary and an obligation to our colleagues. The simple answer and solution are available since 2015. Tried, tested and the ultimate success in the ability to share information with all officers, across borders, city, county, state, and countries in real time.

The sharing of **informational DNA**, which is the basis of life, is crucial for solving cases, officer safety and, importantly the community. **LENSS, Law Enforcement Network Sharing Solution** completely changes all information accessibility in real-time via **unique identifiers** such as tag (license plate), driving license, social security, GPS location, street address, and other numeric means.

**LENSS** is the *ONLY* system that allows officers to take the information they gather every day in their investigations (*Traffic Stops, Vehicle Accidents, Field Investigation Reports, Calls for Service, etc.*) that enables them to collect and share with fellow officers across borders, counties, states, and the nation —instantaneously.

**LENSS** is a patented advanced communication system that uses text and e-mail notifications to facilitate real-time information exchange between Officers within their respective agencies and across jurisdictional boundaries. **LENSS** is so much more than just DMV and NCIC.

**LENSS is the only means to have this information on a global basis.**

Every single officer can be part of the **LENSS Force Multiplier** platform which is more than a substantial change for law enforcement globally today.

Every single country's agency can communicate with real-time information like never before. The likes of Interpol and Europol have never had such direct communications with data etc. They are shrinking their communications network to being next door to each other. That is close quarters which when you share information that quickly, it is going beyond what criminals are expecting.

**Make an appointment; we will visit in person, converse and demonstrate the solution.**

**LENSS is the Needed & Demanded Change...**

**WE ARE IN THE NOW & KEEP YOU; IN THE KNOW...**
