## **Steroidal Intelligence Gathering Empowered Street-Level Cops +**

**'Every officer should know what every other knows,'** has never been a truer, logical and concise statement. There is not one thing in the world that is more important, and that is, collected data from all sources. **You cannot second guess what you do not know!**

**S.I.G., Steroidal Intelligence Gathering** is only available globally with **LENS**, (**Law Enforcement Network Sharing Solution.**)

Every single facet and division of law enforcement daily is presented with information, but what happens? Under, missed and failed reporting is so happening it is an embarrassment! Simple points that a checkbox cannot inform are used and misused daily in millions of cases. This is compromising officer safety and information to solve cases in a proactive and productive manner. *The cost savings are immense and will solve and slow down the budget cut insanity!*

This increases the heartbeat of data/informational collect at street-level. Facts and missed facts that are faced every single day. This missed globally by all departments, agencies and full country policing. The answer, the proven answer is in operation for three and half years and you might not be participating, missing the incredible opportunities for proactive success.

**It does not have to be!** The capability of making states and on a national level a basis for change for both DMV and NCIC has already happened and been working for three and half years successful. Not in a small test group but a complete state and expanding further.

Louisiana is using **LENS** (**Law Enforcement Network Sharing Solution**) with tremendous success and productivity. Adoption is mere semantics and available to be integrated with existing CAD/RMS which then is accessible across the nation with real-time information that is vital for all sworn officers.

Over 18,000 law enforcement agencies who operate independently using disjointed outdated computer technology with programs that are connected to siloed databases that do not reflect real-time crime data, which is more than dangerous to us all.

The makeup and interconnection of all law enforcement crosses all boundaries, jobs, departments, agencies for a secure service nationally and filters down to even a small parish, town or village.

**LENS** connects in real-time over 1.5 million law enforcement officers, departments, and agencies on all levels. **It works globally too!**

Including:

- |                     |                          |                   |                          |
|---------------------|--------------------------|-------------------|--------------------------|
| Federal Agencies    | State Agencies           | Fusion Centers    | County Sheriffs          |
| Police Departments  | DNR                      | Fish/Game Wardens | Transportation/Railroad  |
| Park Police         | Uniformed Officers       | Detectives        | School Resource Officers |
| Parking Enforcement | Drug Task Force          | DEA               | HIDTA                    |
| Court Officers      | Warrant Serving Officers | Cold Case         | Special Jurisdiction     |
| Code Enforcement    | Military Police          |                   |                          |

The list goes on, but you understand we cover all, as all have a part to play in reporting and noting incidents and not just checking boxes. **Robotic checkboxes do nothing for us.**

Law Enforcement Network Sharing Solution

It is empowering the police officer at all levels to play their important role and become what Sir Robert Peel in 1829 determined what a police force should be. The **Nine Peelian Principles** stand firm still today, but go one stage further with the tenth additional principle of shared data/information that Peel had no idea was even possible. The original communications were a *rattle and a whistle* to draw attention, and then the power of the voice. Yes, today harnessed technology by those that have the foresight to deal in simple logic have taken the steps to secure our global officers in completing their sworn duty in a most professional manner.

Dreams are one thing; reality is a whole different ball of wax. Immediately the naysayers will make a statement of we have no money; we cannot afford it. Always the answer without understanding that you cannot afford not to. Investment is way far less than you think.

You are not dealing unconnected software programmers, you working with a team of former law enforcement who know the issues, worked the streets and have been as frustrated as you in not being able to obtain information in a timely manner, if at all.

Loss of time is the killer in subjectivity of solving a case, and real-time information/data access is more than vital. That is why a CJIS compliant Cloud-based solution is most important.

**LENSS** is already built and is an administration-controlled operation and is secured to only be accessed by sworn or warranted officers. Even controlling which individuals/departments/agencies receive the information flow on who can search.

The annual investment per sworn or warranted officer is less than the price of a cup of quality brewed coffee per month. No, not Starbucks latte or specialist coffee! Just good coffee.

***This you did not expect to hear, and now your investigative juices are working!*** How can you not pick up the phone, send an email or even text us to know more? You know your agency, department and importantly your officers deserve this level of competency and professionalism which enhance your productivity and bottom-line budget.

Those that have met our team know our knowledge base and our ability as **Street-Smart Communicators** knowing the business. There is the most important factor; we are not here to dictate something that is already being discussed each and every day. You know you cannot continue without making change. **We know change is difficult, but not with LENSS!**

Without being complex, which **LENSS** is not, it is an exacting solution. Let us explain it this way, **LENSS** is at its base value is an **Event DNA CJIS Cloud Database** which shows the characteristics of **Unique Identifiers** associated to vehicles (Tag), people (licenses/public data), locations (addresses/GPS), events (call for service or traffic stops), and any reported and documented activity.

**LENSS** is truly a **hybrid AI** without having to understand the working of **Artificial Intelligence** and being confused on the application and the continuing proactive results.

You do not require a degree or be a *'rocket scientist'* to understand the ramifications of the intelligence and reporting through **LENSS**.

In simple terms, **LENSS** is the **Fusion of Intelligence and is a Force Multiplier** in enacting cross border/agencies with a collective capability to improve officer safety, productive information sharing which closes cases and is the communications tool in real time globally.

Prime example is the **LENSS Currency Tracking Application**. Photocopying **'Buy Funds'** is more work to nowhere, and we all know it. You photocopy the **'Drug Buy Funds,'** and then place them in an envelope, storing or silo in a filing cabinet, which is not accessible in real time.

Then if you think you have had a hit, you must extract the siloed copies and check each bill against the list of photographs. How many hours have you wasted away from the case in attempting to match the monies?

**Cash is King** in both the selling of drugs and money laundering that are a major global issue and is solvable proactively through **LENSS**.

Law Enforcement Network Sharing Solution

Let us first address currency tracking and why the **LENSS** (*Law Enforcement Networking Sharing Solution*) has a currency tracking application that with currency counting machines not only automatically counts the currency, notates the denomination and records the serial numbers, produces a printed list and places the collected data in a *national/International cloud-based CJIS compliant database* with access by all who have administrative access via a laptop or Smartphone in the field.

Yes, to all officers who when stopping a suspect who has suspicious funds on their person or is a known drug dealer/currency mule can run their currency serial numbers in real-time for a comparison. Even when booking in a suspect to a jail, their currency can be checked for a match. This is a major '**Force Multiplier**' which expands your proactive resources overnight!

Any street-level officer on the **LENSS Currency Tracking Application** can scan funds from their computer or Smartphone, if it is a match for the uploaded currency, the officer whose case it is, who organized the '*Drug Buy Funds*' and placed the monies on the street, **will be notified instantaneously via SMS Text and Email, that is within thirty seconds.** None of the case information is seen by the officer on the street. The two or the department can now communicate and work the case.

This currency module is extreme and exacting communications and is certainly more than unique. Importantly it takes proactivity to a whole new level, and you're wondering why it has never been created before. It took simple logic and street knowledge to create this major global solution. Then, extensively testing and proving all aspects of currency and serial numbers which are the **Unique Identifiers** that are the basis of the **LENSS** (*Law Enforcement Networking Sharing Solution*).

**LENSS** (*Law Enforcement Network Sharing Solution*) platform works as a standalone RMS/CAD or can be integrated with your internal systems.

We are talking **LENSS** (**Law Enforcement Network Sharing Solution**) Platform, which for the last five years has been making a radical difference in the United States in allowing '**officers to know what other officers know**' in real-time of occurrences and with factual information that solves crime and importantly, saves lives.

Using **LENSS** enables all officers to know so much more than DMV/DMLV & National Crime Data. Through **LENSS**, each stop or '*call for service*' when the officer through his laptop or Smartphone makes that inquiry, not only does the data return from those real-time databases, it also returns every single stop or interaction with the vehicle, person, location or event and each officer who has reported such information instantaneously.

**LENSS** goes even further; each officer that previously reported this information via notes is now also informed that you have a connected incident or individual with you. They also have your contact information and can react accordingly. This is a morale changer for all officers and is altering the landscape of policing globally. **Tell me that does not make a difference!**

**Make an appointment; we will visit in person, converse and demonstrate the solution.**

**LENSS is the Needed & Demanded Change...**

**WE ARE IN THE NOW & KEEP YOU; IN THE KNOW...**
