They Say Life Is A Numbers Game, LENSS Does Not Play Games!

Shared Identifiers Save Lives & Solve Crime

You cannot escape numbers, you are surround by them and you, yourself are one!

The moment your life begins there is a number attached to you

It is all about identification, the '**real**' you, so to speak.

As your life evolves, you learn your Alphabet, mathematics which you know that there must be a reason for why parents and teachers drill these skills into you. Letters and numbers will follow us for the rest of our lives and even in death.

Identification numbers include a National Identification System, in America, it is the Social Security Number (SSN) which is used, illegally in many cases to know more about you, your lifestyle and financial information.

You had better never forget it, lose it or allow others to steal it!

Through your life, you are bombarded by people who have identified you, marketing companies, Google, Amazon, Microsoft and a myriad of scam artists who see value in your personal identification number.

No matter where you go or what you do, you require a number!

Welcome to the serious numbers game.

In law enforcement and vitally needed in commerce the identifier unlocks so much information, but not as much as you think. Depart of Motor Vehicles (DMV) or National Crime Information Center (NCIC) are extremely old and designed for a totally different social world. The information when queried by a law enforcement officer is not currently in most cases and is silo stagnant. It also does not afford officer safety with current, 'real-time' information.

What does offer 'real-time' information for the protection of both officers and the public?

LENSS (Law Enforcement Network Sharing Solution)

Let us introduce you to this milestone extraordinaire:

The Digital Virtual Reality of Shared Information Delivery

Globally, all law enforcement has their methods and systems to check who a person is, their possible criminal record or a vehicle's registration and ownership. This is all static information sitting in various databases and is not accessible with just a one-time entry. It is not giving a *'real-time'* picture of who they are stopping and interacting with.

Police officers, especially those that are frontline, street cops, traffic units, warrant service officers, and detectives are blindsided every single day confronting individuals by not having the full facts at their fingertips. Their lives are on the line, the safety of these officers is tantamount to policing and public interaction for success.

The Shared Information Revolution of Law Enforcement has arrived, proven and available to all global law enforcement agencies.

In the USA, as we have stated, NCIC, which is used for criminal backgrounds is now fifty-one years old and like DMV database is static information stored in a dusty data silo. It tells you nothing of what the individual's interaction with law enforcement has been previously or the what the facts are about the participation of the said vehicle and what it has been involved in.

The U.K. is slightly different, but with similar issues. Vehicles stopped use PNC for information and then if need be a secondary query to CRIMINT (Intelligence Information). When a person is checked, it is two-fold again in querying, using CRIMINT and Border/Immigration data. This is also static information and not current with other interviews/stops or investigations.

LENSS works across the board, no matter what part of public safety. It is the proprietary/patented ability to securely share information, which uses your current databases plus all current thread information.

Community Policing	**Traffic Stops**	**Traffic Accidents**
DUI Checkpoints	**LPR**	**Stop & Frisk**
Gang Investigations	**Calls for Service**	**Drug Investigations**
Loss Prevention	**Border patrol**	**Immigration/Customs**
Pedophile Groups	**Human Trafficking**	**Slavery**
CCTV Reports	**Facial Recognition**	**Currency Recording**
Terrorism	**SWAT**	**Warrant Service**

All information gathered through any of those situations is totally shareable instantaneously with those who have a connection across borders and agencies via email and SMS text. Bringing them directly into the capability to solve right there and then.

As the report or citation is written and completed with all checkboxes marked, the officer makes simple notes with the expansion of relevant information on the stop or citation issuance. This is likened to an **Electronic Index Card of Perpetual Information**. Should this match other information already in the system, all other individuals will be alerted via email and or SMS text. This information has now instantaneously been sent to all others that are now alerted. It can include back-up or a specialist unit response.
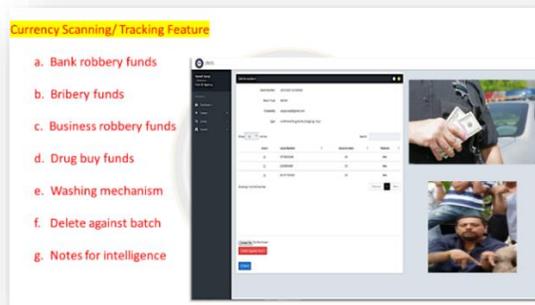

In the event of an officer being sent for a call for service, for a loud noise complaint, he or she can enter the address of the location and know what other concerns or calls have occurred with individuals residing there. This is expanding officer safety with up-to-date information via **LENSS**.

In addition, **LENSS Currency Tracking Machines**, and why the **LENSS** *(Law Enforcement Networking Sharing Solution)* has a currency tracking module that not only counts currency, notates the denomination and records the serial numbers, produces a printed list and places the collected data in a national database for access by all who have administrative access via a laptop or Smartphone in the field. Yes, to all officers who when stopping a suspect who has suspicious funds or is a known drug dealer or currency mule can run their currency serial numbers in real-time for comparison.

If matched, the system not only shows the officer the thread of information to review, it also informs all officers and department agencies who are involved that a comparison has been made. ***This is instantaneous via SMS Text and or Email.***

This alone is a massive change in knowing the currency on the streets. Seized, confiscated or suspect currency can now be recorded in mere seconds, allowing for all officers to have this information instantaneously, with ease to query the monies or currency at a traffic stop or a planned raid where known monies will be.

LENSS Currency Tracking Machines are housed within various agencies/departments/Banks for ease of scanning seized or checking currency and logging for all to have access securely and query.

Today, cross-border crime information sharing was non-existent until now! Yes, proactive police department tools that are agnostic to what devices it can be used on.

Using **LENSS** (*Law Enforcement Network Sharing Solution*), through all of the connection via RMS & CAD using local and national crime data, which has been filed and securely accessible by all, you now know all about the individuals, locations, and connections. These index cards are simply '*Subject Packets*' containing the major thread of all filed information with officer's notes which are totally searchable.

LENSS is a Law Enforcement Networking System

LENSS facilitates real time communication as officers are engaging criminal activity

LENSS enables data driven decisions

LENSS enhances officer safety and public safety

LENSS engages the patrol officer

Through **LENSS**, previous officers who filed information on the individual or with a situation match, they too are informed by SMS text and email. There is now so much background on the incident and its connections; all are fully up to speed without having to use any other person or support channel system. The previous officers can communicate if need be by mobile phone for confirmation. This is protecting the responding officers that are so necessary for today.

Shared Indexed Information via 'Subject Packets' Is More Than the Key!

Firstly, what is a '**Subject Packet**'? it is a digital means to collate all information regarding individuals of interest, arrestees, incidents, traffic stops, Field Interview Reports, Stop & Frisk Information, etc. This is then digitally sharable instantaneously with others who have collectively filed individual reports that match information/data within the existing filed indexed information.

Sharing is a **cross-border protocol**, meaning all, even globally if administratively required.

Information Value Chain

Collect	Store	Validate	Analyze	Share
Definition	**Definition**	**Definition**	**Definition**	**Definition**
■ Data source agnostic	■ Flexible & Extensible Data Model	■ Minimize errors	■ Better BI Services	■ Rich content, context, & collaboration
■ Leverage many form factors	■ Centralized Data Repository	■ Ensure regulatory compliance	■ Enables better decision making	■ One stop shop for information
Example	■ Standards based (XML, CDISC, etc.)	■ Continuous validated at all stages	■ Empowers end users to consume information	■ Empower end users
■ EDC	■ Homogeneous Access	**Example**		**Example**
■ Paper		■ Cleanliness of data	**Example**	■ Reporting
■ CRM	**Example**	■ Quality of data	■ Statistical analysis	■ Business Intelligence
	■ Operational Data Store		■ Trending	■ Dashboard
	■ Datawarehouse		■ Forecasting

PERCEPTIVE INTELLIGENCE

LENSS
Law Enforcement Network Sharing Solution

Information or the storing of information, has always been an issue. In policing, we *live or die* on facts, facts that have been written down at the time of the incident or arrest and then being able to refer to them for the completion of the case. Most times, they are filed away and will never see the light of day until someone *goes fishing*, which takes time and draws frustration. This is so negative to not allow this information available to others; it will save lives and protect officers who now know who they are speaking with, their background and real name. So much more than is available in the majority of agencies today.

Where have we gone wrong? Placing information in silos and not allowing others to see vital information is nonsensical, *is it not?* It hampers the solving of the crime and is costing an inordinate amount of the depleted budget, which you can ill afford!

Perceptive Intelligence is not an outside enterprise that does not have previous and up-to-date working knowledge of global policing. Our ability to look in from the outside with logical business practices, fully understanding the inner workings of law enforcement agencies is second to none. Our team in the majority are former law enforcement personnel, working in street crime, narcotics, gangs, fraud, counter-terrorism with major agencies globally, and the FBI.

The challenges have been exacerbated by budget reductions at a time they are desperately needed and spent wisely. Proactivity is so necessary and will be achieved with valuable collected data/information being made available, securely to officers, right to the palm of their hand, either their Smartphone, Tablet or Laptop computer.

LENSS is a proven milestone success which is affordable and installable without time constraints. This is the *law enforcement revolution* you have been seeking. Have your law enforcement agency speak with us and request a digital demonstration.

If you wish a full Digital Policing Symposium for you and your surrounding agencies, let's do it!

LENSS is the Change...

WE ARE IN THE NOW & KEEP YOU; IN THE KNOW...
