

## **CCTV Footage Is *More Vital Now* When a Serious Event Occurs. Placing the Digital Footage in the Hands of Officers & Investigators Immediately is Key!**

What is the one thing that bugs and niggles us all?

### **Time!**

There is never enough time, it turns out to tick by faster than we want or we become exceeding impatient when the clock is ticking down and there is a demanding deadline.

In policing, *time* is the major enemy, working always in favor of the criminal or so they think. Physical knowledge to assist in an investigation must be placed in the hands of investigators with lightning speed. That is not possible when it comes to the inordinate amount of CCTV Digital Footage that is available today, both commercial, public or neighborhood cameras are dramatically increasing. **C**rime **S**cene **I**nvestigators have a format to comply with, which means they do not always arrive in a timely fashion, which is not their fault. Technology staff is not always part of the initial team.

If there are CCTV cameras at the event location they possibly will contain vital evidence that could and will make the difference in solving the crime and arresting suspects. It is the actual digital event footage that is required and not the whole content of the recording device that is needed now!

Now retrieval of this important footage is attainable by a certified street officer!

**CommSmart Global Group, a LexisNexis Risk Solutions Partner** has added two significant partnership additions with regard to **CCTV** and the capability to utilize with speed and accuracy.

**Super Recognizers International** and **Daetech**. *CommSmart Global Group*, recognizers in themselves, has been ahead of the curve with disruptive technology since its inception. Working to expedite the availability of CCTV and the combined competence of recognizing individuals by humans is unique, effective and cost/time-saving. The ability to have secured CCTV footage in the hands of officers and investigators is a game changer and will make a radical difference in earlier arrests.
