## Law Enforcement Network Sharing Solution

February 3rd, 2019

'County Lines' Siloed Information Is Analytically Stifling Your Arrest Levels
Real-Time Collected Data from Street Level Officers is the Key!

No one knows analytics better than we do! Analysts play a major role in sifting through the data that is collected over a period of time. They work extremely hard and fervently to assist in the solving of crime. Sadly, so much is being missed, lost and under-reported it is not the results we all require or demand. Checkboxes tell us nothing except robotic answers; there is so much more to an incident that is there and may not be relevant today, be there is a connectivity value.

County Lines which is a United Kingdom issue has been described in the following manner:

'*County lines* is when criminals from major cities such as Liverpool, Manchester, London, and Birmingham expand their drug networks to other areas of the country. ... The crime is called *county lines* because a single telephone number is used to order drugs, operated from outside the area.'

Children and vulnerable adults are being used by drug dealers across the country to courier drugs and money*

* This crime is known as county lines

Does the United States have the same issues?

Of course, no one though is discussing as openly as in the U.K., but they should be.

The interconnection of the corridors of roadways, highways and federal thoroughfares daily are having millions of cash, drugs and human trafficking being traveled.

It is not necessary to argue on of what we should or should not be doing; it is about resolution in a cost-effective manner with the outcome being more arrests, incarcerations and serious reduction in these crimes, which in turn changes all crime.

Drugs, cash and human trafficking and the transportation of these as connected crimes are the basis of the majority of all criminal activity.

In the United Kingdom, the term **county lines** is a neologism referring to the practice of using children to traffic drugs into rural areas. In 2018, British police stated that they believed there were around 1,500 drug trafficking routes of this sort in the United Kingdom.

Traffickers recruit vulnerable children, including children in [pupil referral units](#) who have been [excluded from school](#), as drug dealers. Some young people are recruited via "[debt bondage,](#)" whereby they enter county lines to pay off drug debts. Others enter county lines of their own volition, owing to boredom and a lack of legitimate opportunity in marginalized communities.

The practice is also known by those involved as 'going country' or 'out there.' It is facilitated via dedicated mobile phone lines and apps.

[The Children's Society](#), a British charity, criticizes an inconsistent approach by professionals working with children, saying while some police or social workers view the practice as child exploitation, others treat vulnerable young people as criminals.

The serious of these crimes are tantamount to slavery, in 2018, a drug dealer was convicted of offenses under the [Modern Slavery Act](#) relating to 'county lines' activities.

A 2019 estimate by the [National Crime Agency](#) projected the total turnover of all county lines activities throughout the UK as roughly £500 million or more.

Via all of the policing, social workers and organizations who are attempting to stem these crimes, the data loss and underreporting is an even larger cause for the continuing growth.

If someone told you that you change this virtually in months, you wouldn't believe them, as your mindset is a simple view of 'it is what it is.'

I humbly state you are WRONG!

There is a global solution that has been developed five years ago, implemented and been successfully curbing these self-same issues for over three and half years.

LENSS (*Law Enforcement Network Sharing Solution*) platform is a street-level policing tool that is a 'real-time' perpetual two-way record of events. Its accessibility is instantaneous within any event, from a simple traffic stop, a call for service or to an interview with a potential suspect.

All known data through the Department of Motor Vehicles, National Crime Agency Information, other locally used databases or the equivalents of each country, agency or national operation is reported back to the officer and at the same time to every other officer who reported information that has been previously noted.

At the same time, instantaneously those officers who have previously had a reported interaction are informed via SMS Text Message and Email. They know all about what is happening in that moment and have the information of the officer who has just opened this stop or interview and can interact directly with them.

There is categorically no solution on a global, national or local basis that can share across borders and agencies. It is the law enforcement game changer and can be assimilated as '*Policing on Steroids.*'

LENSS (*Law Enforcement Network Sharing Solution*) platform works as a standalone RMS/CAD or can be integrated with your internal systems. The capability to onboard your total agency or force is in a single operation. The support and training are second to none.

The difference with **LENSS** is simple; it was logically designed by former law enforcement officers who work on the day to day operation with the software team. This is not a singular IT operation; we understand the streets, morale of officers and how to motivate all to physically participate in successful crime fighting.

LENSS is a CJIS secure, compliant cloud-based modular platform and is based on perpetual notation which is totally searchable. The query ability is second to none and really does offer officer safety in knowing so much more when interactions are occurring.

The **LENSS Currency Tracking Module** is the only global solution for tracking '**drug buy or organized crime funds**' that you insert into society. If you are photocopying these funds and placing in a filing cabinet for checking later, you are a **LENSS** client!

The money laundering that is a major global issue is solvable through **LENSS**. Any street-level officer on the **LENSS Currency Tracking Module** can scan seized funds from their computer or Smartphone, if it is a match for uploaded currency, the officer whose case it is, will be notified instantaneously via SMS Text and Email. None of the case information is seen by the officer on the street.

Make an appointment; we will visit in person, converse and demonstrate the solution.

LENSS is the Needed & Demanded Change…

WE ARE IN THE NOW & KEEP YOU; IN THE KNOW…
