## **Currency Serial Numbers Catch Killers!** **LENS Currency Tracking Global Platform**

Passing through our hands each and every day is currency, serialized bank notes. The way we pay is not necessarily cash, most of us use electronic banking instruments, debit/credit cards in our daily lives to sustain our lifestyles.

One major group of individuals do not use electronics or digital banking to ply their deadly and addictive trade, **drug dealers**. Cash and only cash are their methods of completing business transactions. Not even cryptocurrencies such as Bitcoin will be entertained.

### **It is CA\$H, Baby!**

No matter what global currency we discuss, they all have serial numbers that identify and confirm where and whence they came. No one is tracking on a potentially global scale, until now.

Drugs and Opioids are ending lives at a rate that the concerns and actions way outpace our ability to pull these issues back into check. The inglorious investors put up the cash, produce the narcotics and distribute. They are investors and want their illegal monies and profits back in their criminal deadly hands.

Photocopying '**Drug Buy Funds**' is a slow process in recording the purchase of street drugs. Going back and checking acquired currency against the paper list takes time, effort and officers off the street. It is not a successful process!

This has changed and **Perceptive Intelligence** has created the **LENS Currency Tracking Global Platform** which comprises of a proprietary hardware and software platform which has radically changed how drug task forces can track the '**Drug Buy Funds**' used to identify drug suppliers, dealers, and users.

This substantial change and revolution in how funds can be tracked in this digital age. If you are photocopying your '**Drug Buy Funds**', then you are one of the clients!

The currency is scanned, automatically counted, denominations determined, serial numbers recorded, images of back and front of the notes are recorded digitally. The case number and details with this information are uploaded to the **LENS Database**, which now can be queried in real-time. It takes seconds!

At a traffic stop, event, call for service or drug task force raid, the currency found can be matched to data in the platform via officers MDT, in real-time. If matched, it will supply the original upload information of the currency, who the officer was, what type of funds they are and importantly communications information such as email, SMS text message, and telephone number. It also informs instantaneously that the original officer via email and SMS Text message. All are now in communications with positive information to prove ongoing cases.

This is a cost-effective revolution which is proven, effective and is attacking the currency trafficking and drug suppliers from the correct direction.

We all know the amount of currency trafficking crisscrossing the highways and byways of the global. Once those currency mules start their engines and hit the pavement, they are yours with a currency tracking platform that will prove where the money originated and whose hands it touched and who are causing mayhem in drug deaths and increased addiction.

Usage across fifty states with the likes of local departments, HIDTA, DEA, ATF, FBI and state Drug Task Forces will radically hamper the transportation of currency and attack the drug and opioid crisis from a positive direction.

Globally it is just the same, imagine Trinidad/Tobago scanning their '**Drug Buy Funds**' or border currency tracking seizures, placing this data in the **LENS Currency Database**. Now, as this currency travels through the Bahamian Chain, suspicious currency funds can be checked in real-time, Jamaica or the Turks and Ciaos can now check the funds and know exactly where it comes from and what case. Then they can be in direct contact with those officers working the case.
