September 17th, 2018

Daddy, Are You Coming Home Tonight?

A question that is being asked more and more in one section of our socially abominable society. You leave the house, say goodbye to the family and go on your merry way to work.

Does not matter what your occupation is, you must travel, interact with others and go about your daily regimen.

Then, you take the reverse journey going home to the waiting family, ***you hope!***

Police officers or anyone in the public safety field who are working with and for the public does not have the same understanding of the daily grind as you do and the expectancy of returning home.

The next call for service (911 or 999) could be the last part of active duty that they will ever be called to. The war against police officers is growing daily and the unknown or genuineness of the call must play on their minds. They still go, knowing that someone, somewhere is in trouble.

Individuals, both terroristic and domestic are making calls for service and ambushing the attending officers. Other incidents are a direct attack on law enforcement when working in the community.

'*The public is the police and police are the public*', the words of a man who had foresight in 1829 and **[Sir Robert Peel's Nine Peelian Principles](#)** stand firm today.

In fact, with known digital technology as in **[LENS S \(Law Enforcement Network Sharing Solution\)](#)**, the **Nine Peelian Principles can be made into a stronger and officer safety increased solution dramatically with an additional *Tenth Principle*.**

Information is bombarding us at such speeds the human brain cannot comprehend and requires assistance. That is where computers and proven analytic software kicks in. Yes, it is likened to Artificial Intelligence (AI).

Today, it is about technology, the social or unsocial media, people running their fingers and thumbs instead of their mouths. We must know so much more about who we connect with or are about to make a closer contact with.

The protection of officers and the understanding of the public who hate and wish to murder law enforcement can and are being detected and will be stopped.

The communications data sharing barrier has been broken and discarded at long last.

Now, every single traffic stop, Call for Service, or Stop & Search, where you query DMV, NCIC or any other national crime database is logged as a thread directly through **[LENS S \(Law Enforcement Network Sharing Solution\)](#)**.

LENS S

Law Enforcement Network Sharing Solution

This simple but direct connection means every single time a tag, call for service or individual is 'touched' by law enforcement, is now showing via the query on one screen, with all that has happened previously. **LENSS** is agnostic to the type of device used, it is a secure cloud-based solution. Laptop, Smartphone, Tablet and Desktop, all can administratively have access.

Prior to **LENSS** it never existed, officers, deputies and highway patrol were blind to anything prior to what was before them, unless there was a BOLO or an issued warrant. They were totally blind to all previous events, meaning the security risk was and is extremely high.

LENSS, which was developed five years ago has not only completed its due diligence, testing, upgrading etc., it is working solidly in the State of Louisiana with law enforcement departments successfully.

Making a radical difference in officer safety, crime solving and reducing expenditure, which is a relief to all regarding their budgets.

LENSS was developed by a partnership of former retired narcotics, and FBI. The street-level understanding is the importance of why it was created, developed and now globally available.

LENSS allows law enforcement to share, search and analyze information across agencies, geographies and IT data systems, all on one screen, which is simple and saves time.

LENSS affords a selection of intuitive and powerful search features to an agency's existing IT infrastructure while steadily linking all jurisdiction and agencies together in our CJIS-compliant cloud. Which in turn links all that have a connection to the event or individual via email and SMS Text in 'real-time'.

LENSS prospers when the network of users multiplies, meaning that our motivation is to provide every law enforcement department/agency across borders access to the data and the best tools at the lowest possible investment.

It is our **total integration** to all IT systems, with our patented/proprietary, custom-built data connectors which integrate with your databases whilst encrypting the data at a FIPS 140-2 compliant encryption standard using AES 256-bit technology before it is transferred to a CJIS-compliant secure facility.

It is the **unequaled access** that is afforded when your agency joins **LENSS**, your sworn/warranted officers will instantly have access to the world of data that others have shared. This access to data across jurisdictions allows our users a unique capability to combat crimes that transcend geography and time, such as simple crime, narcotics, and currency trafficking, gun running, organized retail crime, missing persons, slavery, human trafficking. Beyond agency data, **LENSS** ingests countless data sources from the public and private sector which is immediately available upon a search of a suspect, location or incident.

Let us take you a major step further than any other criminal data suggested solutions, it is not only the law enforcement officer who is enacting the interaction, it is the '**real-time connection**' with all others who have been connected in some fashion to this incident, who filed a report with anything that is further connected. They are now communicated via email/SMS text instantaneously, within thirty seconds. One stop grows to a massive team that can and will assist in solving crimes at a speed that was never thought imaginable before.

LENSS

Law Enforcement Network Sharing Solution

This is not a local, county, state solution! It is a national solution that has been designed to be effective in all 50 States, The District of Columbia and Puerto Rico. In fact, it is capable to work in any country as a global connector of criminal data, which then administratively can be shared.

It has taken a long time to collectively share information with this important data, which reduces investigative costs and allows for a timely resolvment of crimes.

The morale of all law enforcement is increased through the collective satisfaction that they have played a part in the closing of an outstanding crime or preventing more.

Let us introduce you the first steps you can take and where you will see a major difference. Narcotics and currency trafficking are the major connectors to all crime. The change that is available through our [LENSS Currency Tracking](#) is more than revolutionary, it is a major game changer!

Crime is not restricted to a four-block area of streets, it is national and global, we have developed with *our qualified team of Narcotics officers, FBI, ex-Metropolitan Police officers, ranging from Chief Inspectors, Flying Squad, Counter Terrorism, Beat/Ward Officers and incredible data analytics.* They have worked for hand in hand in developing methods of collection and drill down analytics with successes, second to none on a daily basis.

Beat/Ward officers having the ability to use Smartphones/Laptop and Desktop computers to see so much more in a productive time frame.

Agencies are working in outdated information silos and criminals are using this to exploit more criminal opportunities. There is no need any longer to work singularly trying to put the pieces of the puzzle together. We have the solutions to allow all agencies to work together efficiently and cooperatively across borders and agencies.

If it sounds like we are being *braggadocios* about our capabilities, *we are not!*

We only bring you the facts that we wish to work side by side with solution tools and mindset of major proportions. It is the **Perceptive Intelligence** that is a revolution in shared communication via **real-time data**.

We are a commercial enterprise who collectively have invested in increasing access to real-time data collection from the streets sharable with all.

We are here now! Working with knowledge of Global Policing and data manipulation for a proactive result.

I believe we should be meeting with you all. It is with senior management and departments who have been charged to create a solution. Which by the way is already here and will assist in the demands of the community and our governments.

We are all on the same page and need to be in the same room for a down-to-earth conversation on the capabilities of Digital Policing now and in the future.

It is not about who or what we are, it is about solving a dire situation and it is no good asking where policing will be in 2025 if you do not listen, review and understand what is already here in the working in the Atmosphere!

A meeting, please...

LENSS is the Change...

**WE ARE IN THE NOW & KEEP
YOU; IN THE KNOW...**
