## Deconflicting, Deconfliction Bring Every Law Enforcement Officer Into the Fold

Scan for the latest information

In law enforcement and policing, deconfliction is prominent with **High-Intensity Drug Trafficking Areas (HIDTA)** program, which is a federal program administered by the White House Office of National Drug Control Policy, designed to provide resources to federal, state, local, and tribal agencies to coordinate activities to address drug trafficking in specifically designated areas of the country.

So, what is this strange word? Often investigative efforts, such as undercover operations, create a situation in which agency personnel works in close proximity to each other. In other situations, agencies or officers may interfere with each other's investigations, causing unintentionally concerns or blow the whole operation.

Event deconfliction is the process of determining when law enforcement personnel are conducting an event in close proximity to one another at the same time. Events include law enforcement actions, such as undercover operations, surveillance, and executing search warrants. When certain elements (e.g., time, date, location) are matched between two or more events, a conflicting result. Immediate notification is made to the affected agencies or personnel regarding the identified conflict.

The **High-Intensity Drug Trafficking Areas (HIDTA) program**, created by Congress with the Anti-Drug Abuse Act of 1988, aids Federal, state, local, and tribal law enforcement agencies operating in areas determined to be critical drug-trafficking regions of the United States. This grant program is administered by the Office of National Drug Control Policy (ONDCP). There are currently 28 HIDTAs, which include approximately 18 percent of all counties in the United States and 66 percent of the U.S. population. HIDTA-designated counties are located in 49 states, as well as in Puerto Rico, the U.S. Virgin Islands, and the District of Columbia. The DEA plays a very active role and has nearly 600 authorized special agent positions dedicated to the program. At the local level, the HIDTAs are directed and guided by Executive Boards composed of an equal number of regional Federal and non-Federal (state, local, and tribal) law enforcement leaders. The 2016 HIDTA annual budget is \$250 million.

The purpose of the **HIDTA** program is to reduce drug trafficking and production in the United States by:

- ① Facilitating cooperation among Federal, state, local, and tribal law enforcement agencies to share information and implement coordinated enforcement activities;
- ① Enhancing law enforcement intelligence sharing among Federal, state, local, and tribal law enforcement agencies;
- ① Providing reliable law enforcement intelligence to law enforcement agencies to facilitate the design of effective enforcement strategies and operations; and
- ① Supporting coordinated law enforcement strategies that make the most of available resources to reduce the supply of illegal drugs in designated areas of the United States and in the Nation as a whole.

To qualify for consideration as a **HIDTA**, an area must meet the following criteria:

- ① The area is a significant center of illegal drug production, manufacturing, importation, or distribution;
- ① State, local, and tribal law enforcement agencies have committed resources to respond to the drug trafficking problem in the area, thereby indicating a determination to respond aggressively to the problem;
- ① Drug-related activities in the area are having a significant harmful impact in the area and in other areas of the country; and
- ① A significant increase in allocation of Federal resources is necessary to respond adequately to drug-related activities in the area.

A well-planned operation in this original form, but times have changed and changed drastically. The resistance to change or even contemplating has been holding back a far great success ratio and must be considered in this technology age. It is the *Internet of Things* and please do not think you have got to start right now planning a major upheaval of protocols, hiring more officers from surrounding counties near your groups.

**LENSS (Law Enforcement Networking Sharing Solution)** has already created that for you. Not just created but has been in operation for over three years!

Let us first address currency tracking and why the **LENSS (Law Enforcement Networking Sharing Solution)** has a currency tracking module that not only counts currency, notates the denomination and records the serial numbers, produces a printed list and places the collected data in a national database for access by all who have administrative access via a laptop or Smartphone in the field. Yes, to all officers who when stopping a suspect who has suspicious funds or is a known drug dealer or currency tracker can run their currency serial numbers in real-time for comparison.

If matched, the system not only shows the officer the thread of information to review, it also informs all officers and department agencies who are involved that a comparison has been made. ***This is instantaneous via SMS Text and or Email.***

This alone is a massive change in knowing the currency on the streets. Seized, confiscated or suspect currency can now be recorded in mere seconds, allowing for all officers to have this information instantaneously, with ease to query the monies or currency at a traffic stop or a planned raid where known monies will be.

**LENS Currency Tracking machines** are housed within various agencies/departments for ease of scanning seized or checking currency and logging for all to have access securely and query.

The improvement of covering the nation through the **HIDTA** Groups is one thing, what if we can bring every single officer in the USA on board?

What is even more intriguing, the full **LENS (Law Enforcement Sharing Solution)**. It is now a stronger search engine format than you have ever seen or touched!

Everything you require is encapsulated within **LENS, DMV, NCIC, HIDTA, Safety Net, LPR, PNC, CRIMINT, Accurint local crime and public data with any other databases you wish to add**. As you action your normal verification process via **LENS**, it accesses all these steps on one screen, smartphone, laptop, PC Desk it works with all.

Within one operation, no additional programs to use, no more retyping names, vehicles tag or other vital information, right in the palm of the hand and at the fingertips.

It is the additional information that is the key, every report and officer's notes are matched in real-time and alert the officer of every interaction the individual has had with law enforcement, from traffic stops to infractions, with important detail from the notes which will be compared and matched, including any further financial information such as debit/credit cards.

Checkboxes cannot do that. The simple visual ability, comments, location, associates are brought right to you. Preparing you for the true statements which have previously been stated. This is ensuring your safety as to who you really are encountering.

Adoption by **HIDTA & Safety Net** would radically make more sense and increase the arrests and the safety of all officers, not just the Narcotics Task Forces, but also every officer who is stopping individuals, either by traffic stops and calls for service.

**LENS** works in this simple manner, local crime data is collected by the agency, placed within the system for all to have access to. Denoting it is borderless, it has no barriers for agencies with cybersecurity for all. Neighboring counties, cities, states and all agencies can share information which once was hidden, even if crimes happen just over county border, today all is revealed.

**LENS**  
Law Enforcement Network Sharing Solution  
BY PERCEPTIVE INTELLIGENCE  
*"Every Officer should know what other Officers know"*

It not only looks at the criminal information, at the same time the ability to review and match all officer denoted information within their notes is analyzed, matched, reviewed and included in any information that is accessed, meaning the ability to hide is diminished. It will even share with your backup teams and management.

We believe that this is not just a local issue, it must be approached from a national and statewide perspective, which would act as a blanket coverage of all. The majority of states have pockets of crime which adhere to major cities. Those are looked at by small cities on the perceived possibilities of increases and it can be proactively reviewed.

We are looking at the core criminal hotspots which when interlinked via our capabilities reduces overall crime, increases community trust, and respect and produces a far more harmonious presence.

What is so important is the fact that every single officer that has encountered your suspect is now informed instantaneously via email or SMS text that you are inquiring about on this person or situation. Will even inform your backup units who now have the same information report thread, so they are not coming in blind.

Not having current and up-to-date information in law enforcement is a killer! Knowledge of what you are walking into for a 'call for service' has never been so vital in our increasingly violent society. Police officers are frontline and are called upon to resolve and solve individual's businesses and community's issues in regard to criminal acts or disputes.

Here is the issue, law enforcement databases, all, in fact, local department, county, state, and Federal are so disjointed, disconnected, not shared and hidden in data silos, which is costing an inordinate amount of time, depleting the reduced budget, increasing frustration and placing officer safety at an even deeper risk. Most departments have such outdated computer technology and hardware, they don't have the budget for necessary upgrades.

The 18,000+ law enforcement agencies in America and the 43 main police constabularies, plus lesser known smaller agencies within the United Kingdom are all going in different directions trying catch up with technology which will advance crime solving.

**LENSS (Law Enforcement Networking Sharing Solution)** brings together the whole nation and globe into a data sharing opportunity, second to none. Imagine this as a force multiplier with extraordinary value. Drugs and currency are the basis of all crime and **LENSS (Law Enforcement Networking Sharing Solution) is the basis to solve the issues by having crime and currency data at all officer's fingertips.**
