# Emergency Management Network Sharing Solution

## *Perpetual Intelligence Gathering Collection*

**Perceptive Intelligence** who brought you the overwhelming successful **LENS** (Law Enforcement Network Sharing Solution), have now released our **EMNS** (Emergency Management Network Sharing Solution).

It is the unique proprietary patented numerical identifiers that are our success and yours.

This is a vital game changer when information is flying at you at speeds that your departments miss and lose information, but not intentionally. Data loss in times of emergency do not need to occur, importantly, the ability to collect more is at hand! In times of emergency, your well-trained teams are dealing with so much input that a centralized a secure CJIS compliant database is demanded.

**Perceptive Intelligence** created for law enforcement globally such a database which has been in operation in the field for over three years. Real-time information is not only vital, it is demanded in decision making and logging intelligence information required by so many to have at their fingertips for those decisive actions. Available in the cloud on laptops and Smartphones.

**Emergency management** is the managerial function charged with creating the framework within which communities reduce vulnerability to hazards and cope with disasters. **Emergency management** seeks to promote safer, less vulnerable communities with the capacity to cope with hazards and disasters. It is all about the data and its real-time availability!

Natural disasters, active shooter, man-made incidents, local hazardous materials storage or accidents, no matter what, **Emergency Management** is in the thick of it and expected to function seamlessly.

It is the functionality of **EMNS** that when integrated with your Mobile CAD or RMS abilities connected to whatever analytical capabilities you use, that are the absolute difference.

Law Enforcement Network Sharing Solution

Intelligence gathering is what we all have used, noting our findings on whatever method we can. Later transferring to a database if we remember to do so and not missing anything. Lost data is costly and can cause immense concerns.

Remember the day of 3 x 5 index cards? Back in the day, 1960s/70s that was how we gathered intelligence and noted such detail. It was then collated by more individuals and filed as a reference. It was siloed, maybe never seeing the light of day ever again. It becomes 'lost data' that among the notes might be solid information that would have made a major difference.

Let us give you an example of **EMNSS** if we may.

A simple flood is never simple! Emergency management when property is involved has so much that requires to be documented by different departments and internal organizations. The right hand has to know what the left hand is doing; it is that simple.

The flood becomes an **Intelligence Report** which as unique identifiers, street address, location, names of those affected and of course it is assigned a case or incident number. Are they centralized? Is everyone looking at the same information? As you move forward in the following days, is everyone up to date and on the same page? Today, No!

With **EMNSS** you are! No matter how it is created, the *unique identifiers* are connected and searchable. Each update is within the thread and on a query basis all updatable in real-time.

Each individual within your organization can administratively be added or subtracted as needs deem. Normal daily working has a communication factor, when an incident occurs, the status changes and others, including law enforcement, all public safety and volunteers are added with restricted access. Everyone is now under one umbrella with information at their fingertips which is in, importantly real-time. Yes, the Smartphone is key, and nothing is left on the mobile phone.

That is just the surface; it connects all, each level of Emergency management has their own system which functions autonomously. So, State, County, and City have active data which when an emergency happens can know be interlinked with vital information for all to share. The administrative control of who has access is yours, yes you control. It is times of need all available data is required for all parties to succeed.

We can bring you a full overview in the form of a Symposium for your state which would include all Emergency management connected departments, county and city, and all public safety.

**Make the call; we will make you more connected than ever!**

**EMNSS is the Change...**

**WE ARE IN THE NOW & KEEP YOU; IN THE KNOW...**
