

LENSSOLOGY & GLOBAL CORRIDORS! Currency/Financial Tracking Network Sharing Solution

Drugs and money or if you like, narcotics and currency go hand in hand. Currency is the tool of the trade. Illegal Drug manufacturers, cartels and down the line drug dealers only deal in cash.

The efforts to reduce the drugs on the streets is a never-ending circle, which is fed from the start with currency. The money, the funding to start the transactions. The currency has to be in the right place to even start a narcotics transaction, the grower/processor, illicit drug manufacturers and the investment group. Once the drugs are sold, the profits must be returned via the same corridors of shame.

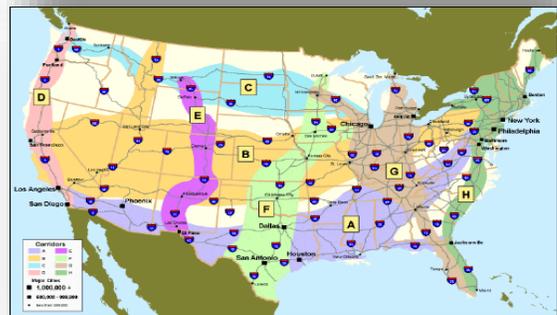

Pure business, with a difference, **it is all cash!**

The highways and streets of America are infested with trafficking mules of all ages moving currency, drugs, sex slaves, humans, both adults and children for profit.

Our society is being driven by illegal drugs which in themselves are dangerous enough. People will go to any length to get their fix and could care less who they harm to get into that moronic state.

There is nothing more important to any law enforcement officer than safety. This can only occur when we have the correct information at our fingertips. In the first place, it has to be collected and readily available to all. Big data sadly is always stored in data silos and not accessible to those that require it in a timely or secure manner.

Both drug and currency mules are crisscrossing the roads, motorways, and freeways of the global. Billions of valuable currencies are traveling 24/7/365 open to being stopped by the highway patrol, sheriff's deputies and police officers. Right now, they have no way at the actual stop to know anything about the currency or anything about the driver or passengers past connections with law enforcement, unless there is a warrant or an issue that is suspicious.

University students and others are hired as onetime mules to courier these funds as they are clean with no criminal records, which makes it difficult to recognize by roadside law enforcement. Due to the age of the students, they believe they can go forever and drive whilst tired, making mistakes or using something to keep them awake. This is where they make the driving mistakes and open the door for law enforcement to enact a traffic stop.

If a traffic stop is made and the amount of currency on the person or within the vehicle is suspect, what options do you have to record the currencies or compare them with known association to drug monies? You do not, you have no idea of the monies on their person whatsoever.

Sure, there may be a paper record of photocopied bank notes from a previous seizure available somewhere, which means a heck of a lot of time to track it down trying to verify. Who really goes back and checks those reams of photocopies of currency?

No one efficiently, you do not have the time or the manpower!

This is the digital age and yes, there are currency machines that can and will record serial numbers in seconds and then store the results in a data silo. These are far from readily available to be compared and certainly not available via a network to all officers on the streets and freeways.

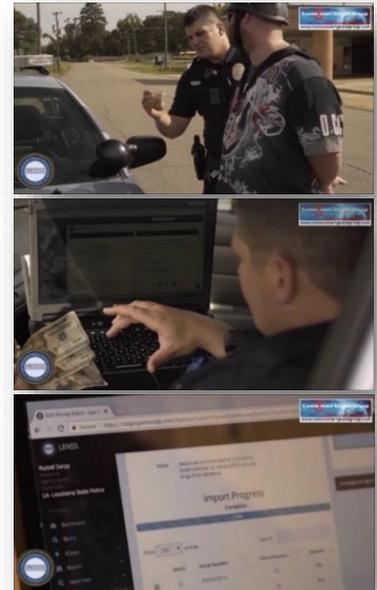

We have radically changed that!

For organizations that are frontline in the cessation of narcotics and have all fellow agencies working similar cases, in the same manner, they are overseen by **HIDTA (High-Intensity Drug Trafficking Areas)**, especially in deconfliction.

Processing deconfliction requests are central to the responsibility of **HIDTA**. Law enforcement officers conduct numerous events, such as surveillance, serving search warrants, and making undercover drug buys throughout the day in an effort to reduce drug trafficking and related crimes. As investigations progress, the targeted individuals may operate across multiple jurisdictions and have ties with other criminal groups or DTOs.

Event deconfliction help to ensure officer safety by notifying agencies of potential conflicts in enforcement actions taking place in close proximity to one another.

Now there is a major change in how all agencies can and will work together in the collection of currency serial numbers, which is immediately uploaded into **LENSS Currency & Financial Tracking Module** and available to all law enforcement in the field across jurisdictions to clear or arrest the suspect.

Law enforcement can manually enter currency serial numbers, the **LENSS Currency & Financial Tracking Network Sharing Solution** does the rest in querying for a match. They can have a small version of the unit in vehicles to automatically scan currencies.

Every *State Public Safety Department* within their *Fusion Center* with its *Narcotics division* can now expand the network of officers, to literally every officer via any device to connect through **LENSS** and your State's database.

This is not only a nationwide solution, it is global!

Seized, confiscated or suspect currency can now be recorded in mere seconds, allowing for all officers to have this information instantaneously, with ease to query the monies or currency at a traffic stop or a planned raid where known monies will be.

LENSS Currency & Financial Tracking machines are housed within your various agencies/departments for ease of scanning seized or checking currency, logging for all to have access securely.

Our **LENSS Currency Tracking Network Sharing Solution Pilot Program** is concise, simple and importantly effective. The up to 90-day opportunity includes **LENSS Currency Tracking machines**, the number to be determined at locations which have the most effective collection of seized or acquired funds. Officers will be coached and trained in the usage of inputting the recorded currency into **LENSS**, which is easy to understand with the step by step operation.

Officers in the field will be able to insert the currency they encounter in the field manually via the system. Hand-held devices are available shortly.

Using a CI in making buys with this recorded currency is a whole new world of really knowing, comparing and securing a conviction with evidence that is readily available. This is efficiency at its finest! No more comparing photocopied currency and slaving over comparison tasks which take hours, if you ever actually have time to do so.

The efficiency factor is overwhelming and now that you are recording so much more currency it is populating the databases and increasing the opportunity to match currency, connecting with the illegal monies, the dealers, and drug/currency mules.

Knowing that you will want to continue after the pilot program, those **LENSS Currency Tracking machines** used in the program will be billed at a cost of \$3,499.00 each, with an annual agency license of \$3,000.00.

Take the **LENSS (Law Enforcement Network Sharing Solution)** approach and we shall show you so much more you can achieve with **LENSS Currency Tracking Network Sharing Solution**. If you think this is mind-blowing, we have a lot more to talk about and change your capabilities!
