

Information/Data Must Be Accessible & Digitally Administratively Available

Communications is pure common sense and not some robotic procedural regimen. In our personal lives and business, we seem to get stuck in ruts. You know the feeling where you use the same word over and over again in the meeting like you are affixed and linked at the hip. We have all done this!

Policing is no different, it is a conversational format that works in general, but misses so much! Yes, officers have the verbal situation script that they use each and every time when a sequence is occurring. On the other side in this direct conversation is the interviewee, who has not been coached on the answers in the majority of cases.

During the conversation/interview, *'keywords', actions, objects* and visual examples are noted by the officer as these cannot be placed in a normal report with a check-box. They must appear in the *'Notes Section'* of the information gather of the report, which can be likened to an *Index Card* which *back in the day* traveled across the Collator's desk as intelligence gathering and was then filed in a storage box or silo, rarely *seeing the light of day*.

Not today!

You would think in this technology social media world it would be right there for all police officers/detectives/administrators to have access and be informed about if it is connected to something on their patch or associated to a previous situation.

It is not!

Oh, but it is with the **CommSmart Global Group, a LexisNexis Risk Solutions Partner** and **LENSS** (*Law Enforcement Network Sharing Solution*). No, not some software company who have buried their heads in pure technology and programming, they know the streets, they understand policing.

The majority of the personnel are former law enforcement officers, counter-terrorism, narcotics, gangs, fraud, federal and government agencies and importantly more than street savvy of the streets of America, the United Kingdom, and Europe. Of course, the creation of the patented, proprietary software is the influencer of productively solving crime in the most proactive manner ever imaginable. Actually, it is sharing information which is compared and solves the crimes and potential crimes productively.

LENSS works across the board, no matter what part of public safety. It is the patented ability to securely share information.

- 👤 **Community Policing**
- 👤 **DUI Checkpoints**
- 👤 **Gang Investigations**
- 👤 **Loss Prevention**
- 👤 **Pedophile Groups**
- 👤 **CCTV Reports**
- 👤 **Terrorism**

- 👤 **Traffic Stops**
- 👤 **LPR**
- 👤 **Calls for Service**
- 👤 **Border patrol**
- 👤 **Human Trafficking**
- 👤 **Facial Recognition**
- 👤 **SWAT**

- 👤 **Traffic Accidents**
- 👤 **Stop & Frisk**
- 👤 **Drug Investigations**
- 👤 **Immigration/Customs**
- 👤 **Slavery**
- 👤 **Currency Recording**
- 👤 **Warrant Service**

All information gathered through any of those situations is totally shareable instantaneously with those who have a connection across borders and agencies via email and text. Bringing them directly into the capability to solve right there and then.

This is the connection that has been missing since the inception of policing by Sir Robert Peel, in 1829. Peel's **Nine Peelian Principles**, the **Policeman's Bible** now has the **Tenth Principle**, a *Perceptive Intelligence*, **LENSS** (Law Enforcement Network Sharing Solution). Truly a massive critical improvement necessary for the social/criminal situations of today and also previously really required.

We have all used **Index Cards** which believe it or not have played such an important role in crime fighting that is why in the creation of **LENSS (Law Enforcement Network Sharing Solution)** it has been so successful in sharing cross-border information/agencies, which allows law enforcement officers to be better prepared and protected.

Today, cross-border crime information sharing was non-existent until now! Yes, proactive police department tools that are agnostic to what devices it can be used on.

It is important to show why this is so significant. Let us use one agency that we all know of and heard of, the London Metropolitan Police. Like all agencies, they have communications via radio, mobile phone, and laptop computer. Each time an incident occurs, the information is received via 999 or from another officer, this goes through a dispatch system and is the same as used by all global agencies. Once the officer or officers are dispatched, they now require intelligence or Intel, this is garnered not from dispatch but by a separate support channel. Yes, another connection is required, they will supply intel to the officers, not always in a timely fashion which leaves those responding basically open for issues once arriving at the scene or incident.

On July 7th, 2018 it was reported and confirmed by working Metropolitan Police Officers that due to lack of personnel the support channel was shut down. Meaning that all dispatched calls sent to officers left them blind, without any intel whatsoever. *Draw your own conclusion!*

This will not occur when using **LENSS** (*Law Enforcement Network Sharing Solution*), through all of the connection via RMS & CAD using local and national crime data, which has been filed and securely accessible by all, you now know all about the individuals, locations, and connections. These index cards are simply 'Subject Packets' containing the major thread of all filed information with officer's notes which are totally searchable.

LENSS is a Law Enforcement Networking System

LENSS facilitates real time communication as officers are engaging criminal activity

LENSS enables data driven decisions

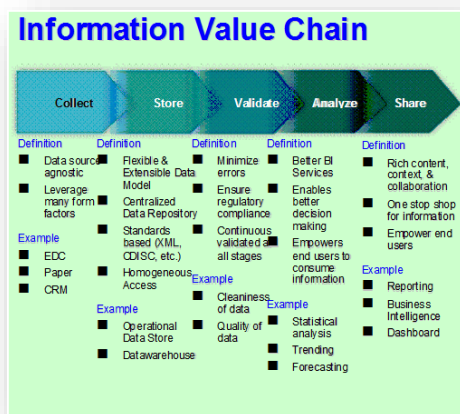

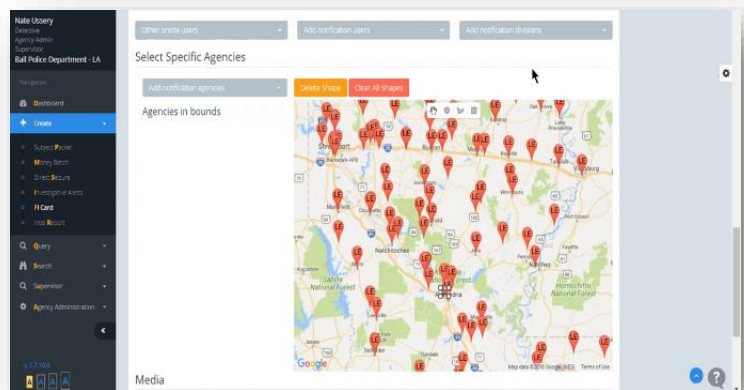

LENSS enhances officer safety and public safety

LENSS engages the patrol officer

Through **LENSS**, previous officers who filed information on the individual or with a situation match, they too are informed by SMS text and email. There is now so much background on the incident and its connections, all are fully up to speed without having to use any other person or support channel system. The previous officers can communicate if need be by mobile phone for confirmation. This is protecting the responding officers that are so necessary for today.

Shared Indexed Information via 'Subject Packets' Is More Than the Key!

Firstly, what is a 'Subject Packet'? it is a digital means to collate all information regarding individuals of interest, arrestees, incidents, traffic stops, Field Interview Reports, Stop & Frisk Information etc. This is then digitally sharable instantaneously with others who have collectively filed individual reports that match information/data within the existing filed indexed information. Sharing is a **cross-border protocol**, meaning all, even globally if administratively required.

Information or the storing of information, has always been an issue. In policing we *live or die* on facts, facts that have been written down at the time of the incident or arrest and then being able to refer to them for the completion of the case. Most times, they are filed away and will never see the light of day until someone *goes fishing*, which takes time and draws frustration. This is so negative to not allow this information availability to others, it will save lives and protect officers who now know who they are speaking with, their background and real name. So much more than is available in the majority of agencies today.

Where have we gone wrong? Placing information in silos and not allowing others to see vital information is nonsensical, *is it not?* It hampers the solving of the crime and is costing an inordinate amount of the depleted budget, which you can ill afford!

CommSmart Global Group, a LexisNexis Risk Solutions Partner, is not an outside enterprise that does not have previous and up-to-date working knowledge of

global policing. Our ability to look in from the outside with logical business practices, fully understanding the inner workings of law enforcement agencies is second to none. Our team in the majority are former law enforcement personnel, working in street crime, narcotics, gangs, fraud, counter-terrorism with major agencies globally, and the FBI.

The challenges have been exacerbated by budget reductions at a time they are desperately needed and spent wisely. Proactivity is so necessary and will be achieved with valuable collected data/information being made available, securely to officers, right to the palm of their hand, either their Smartphone, Tablet or Laptop computer.

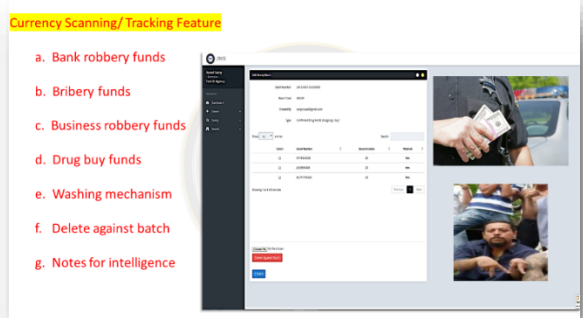

LENSS is a proven success which is affordable and installable without time constraints. This is the **law enforcement revolution** you have been seeking. Have your law enforcement agency speak with us and request a digital demonstration.

If you wish a full Digital Policing Symposium for you and your surrounding agencies, let's do it!

[Take a look at more information](#)

There a series of videos that will show you just some of the success and uses of LENSS.

Do Not Let Another Day Go By Without Investigating How You Can Radically Improve Your Knowledge!

We Are in the Now & Keep You; In the Know...

- REVOLUTIONIZE YOUR:**
- ❖ COMMUNICATIONS
 - ❖ SAFETY OF OFFICERS
 - ❖ SUCCESSFUL CONCLUSIONS OF CASES
 - ❖ POSITIVE BUDGET RESPONSE
 - ❖ PROACTIVE EFFECT ON ALL
