Real-Time, Global Cross-Border & Agency Communications/Data Sharing

FACT! Never, until **LENS**, (**Law Enforcement Network Sharing Solution**) platform has there been the ability to share real-time data and information. This capability is not only effective policing; it is all about officer safety. **LENS** is far from marketing or technology hype; it is logical policing and corporate security that is demanded in this unsocial world.

Do not think we have left out the **corporate world**, you are as important, as wherever the public is, crime happens and serious events occur. **LENS** works as well within your organizations as well. Whatever security incident happens within your facilities it is reported in real-time to law enforcement and is your security conduit, like never before. (see below)

What is LENS (Law Enforcement Network Sharing Solution)?

LENS is the *ONLY* system that allows officers to take the information they gather every day in their subject packets ^{*(1)}, FI Cards, and investigative notes which allows them to share it with fellow officers with matched information across the nation — **instantaneously**.

LENS, a patented advanced cloud-based database communication system that uses text and e-mail notifications to create a real-time exchange with officers within their respective agencies and across jurisdictional boundaries. Interacting with your current CAD & RMS Databases. Electronic Field Interview (FI) Cards, Investigative Alert push notifications, LENS Notes that are instant, globally searchable, with 'buy walk' currency tracking, corporate security events and much more!

- **LENS is a Law Enforcement Networking Sharing Solution**
- **LENS facilitates real-time communication as officers are engaging and reporting more criminal activity**
- **LENS enables data-driven decisions**
- **LENS enhances officer safety and public safety**
- **LENS engages the beat/patrol officer**

LENS

Law Enforcement Network Sharing Solution

Investigative Alert Feature

- a. BOLO (Global or Geofenced)
- b. Wanted Persons (Fugitives/Drug Dealers)
- c. Suspicious Vehicles (Stolen)
- d. Missing children
- e. Missing person
- f. Sharing Important Information Instantaneously

Criminal and Non-Criminal Classifications for Subject Packets

- a. Site Survey
- b. Restraining Orders
- c. Criminal
- d. Custody Hearings
- e. Concealed Weapon Permits
- f. Probation and Parolee

Supervisor/Managerial Features

- a. Incomplete Investigation
- b. Seizure Approval
- c. Division Assignments
- d. Activity Audit Logs
- e. Deactivate Subject Packets

Currency Scanning/Tracking Feature

- a. Drug buy funds
- b. Business robbery funds
- c. Bank robbery funds
- d. Bribery funds
- e. Washing mechanism
- f. Delete against batch
- g. Notes for intelligence

Parent/Guardian Notification Feature (Public Relations Tool)

- a. Contact notifications to parents/guardians when police encounter a child or special needs, individual
- b. Deterrent
- c. Identifies victims (children) with Human Traffickers

Parent/Guardian Notification

Be notified if you're Driving Teen has Interaction with Law Enforcement

Just complete the attached form, and if your child's driver's license or vehicle license plate is queried, you will get a delayed text, call, or email from the law enforcement agency about the encounter. More importantly, you have the option to provide law enforcement officers medical information you would like first responders to know.

Alternate Notifications

- a. Notifies Back-up Officer
- b. Notifies Specialized Units

LENS

Law Enforcement Network Sharing Solution

***₍₁₎ What is a 'Subject Packet'?** it is a digital means to collate all information regarding individuals of interest, arrestees, incidents, traffic stops, Field Interview Reports, Stop & Frisk Information, etc.

LENS is communication and data sharing on steroids, with total ease of operation. It is a force multiplier that brings all officers together under one shared solution. Now available globally which interconnects all agencies with information that deserves to be in all hands, while still measured by administrative control.

So many law enforcement departments and corporations globally are trying to bring their agencies into the Internet world of policing/security technology. Logic is logic, but twenty-five similar software packages are wasteful.

Perceptive Intelligence has created a global solution, which has been in operation for over three years effectively!

Law Enforcement Network Sharing Solution

LENSS Currency Tracking - Let us step you through the creative solution of tracking 'drug buy' funds with increased productivity and efficiency.

It is the narcotics officer who investigates the initial inquiries and follows the leads, but also circulates cleared 'drug buy funds' or other cash into the hands of organized crime and drug cartels enabling tracking. The method that is used to record these funds is as archaic as the original Xerox copying machine.

Yes, you photocopy or take pictures with your Smartphone of the currency used in a covert currency operation. To establish if a currency bill is one you recorded, you have to remove from evidence the envelope containing the sheets of paper, the copies of your registered buy. It is tedious, boring and due to the pressure, hardly ever is successful.

Knowing that these are passing billions of dollars per year through unassuming banks and casinos requires massive slow-moving investigations, *until now*. *Perceptive Intelligence*, who have made radical changes in following narcotics task force 'drug buy funds' have strategically been examining the same process of organized crime, drug cartels with transactions at banks and casinos. To this end, they are releasing the capability to track these funds through the **LENSS Currency Tracking Platform**.

The one criterion that is common with all currency is a serial number, boldly printed on every bill, no matter what the origin of the currency. Through patented and proprietary developed software, the **LENSS (Law Enforcement Network Sharing Solution) Platform** is able through the extensive global database to have real-time access to scanned funds by all officers within the *LENSS Platform*.

The **LENSS Currency Tracking Platform**© increases those working on drug cases exponential and is the 'Force Multiplier' without having to hire more street-level officers. *Created by former law enforcement for law enforcement*.

It is secure, CJIS compliant, real-time database with necessary extreme encryption.

So, what are we talking about? When preparing for a 'Drug Buy,' simply follow these steps.

The LENSS Currency Counter and Proprietary Patented Software Platform:

- counts the bills, virtually all denominations,
- records the serial number
- takes pictures of the front and back of the currency
- prints a record
- now digitally create your case file and send to the secure cloud

Law Enforcement Network Sharing Solution

LENSS Corporate Event Security

Access to facilities, the open-door policy is not working, we do not know who is who, this is a major anxiety today. Having no idea of the intentions of people who enter our facilities, should be of concern regarding liability and '**Duty of Care**' responsibility. We are all too trusting in this litigious society and are witnessing daily incidents in public and private facilities, schools, hospitals, courthouses, casinos, event, and sports centers. If you can think of where these violent or disruptive actions can and will take place, add it to your list.

LENSS (Law Enforcement Network Sharing Solution) platform has proven that we must know much more than the in-place crime and public databases we query and show us. DMV and NCIC are outdated in this socially smart technological world.

We call it '**Touch,**' the information that is simply collected by all police officers who via protocol access see when they stop a vehicle or check a driving license which is noted for all others who stop the same vehicles or individuals. Having a simple knowledge of the additional facts, which relates to the safety of all is necessary.

What is the key, the one thing that will and does make the difference where the public has access to a facility? Subtle confrontation using identification carried by us all. The Driving License or Identification Card, linked to public information which is accessible in seconds for verification. This is a proactive measure that must, and we will act on now.

It is important what is behind that name and how this information is noted, accessible and in a period of need in absolute real-time.

As in law enforcement, each incident or person is a '**subject packet,**' an old fashion 3" x 5" card that will be actioned and filed. Only today, this is an electronic Internet Cloud-based thread, which is a *CJIS Compliant Secure Solution* that is accessed and updated for all to see that have administratively granted access, even on the outside with the law enforcement street officers and Public Safety.

LENSS
Law Enforcement Network Sharing Solution

In the corporate world you have no direct access to crime data whatsoever, you though can build the '*subject packet*' with information supplied to you via law enforcement as it would have been shared publicly to you and your inquiry directly to law enforcement, such as an arrest on your premises or a trespass order, etc. Information that must be noted and available for all subsequent encounters.

The corporate solution contains our ***Investigative Alert and BOLO*** features and much more.

These are vital in times of emergency and especially if we have an '***Active Shooter***' situation. You can train as much as you want with basic protocols, but it is still training. The reality and realism cannot be drilled down via a training simulation into people, and on the day, it will happen, it is not if this day will come, it is a fluidity of communications and actions that rule the day and has a safe outcome that we all strive to achieve.

License Plate Recognition (LPR) has just taken a major turn with the integration within **LENSS**. With existing cameras, the software solution can now bring so much more information regarding a license plate and all of its connections and to whom.

Includes connection to public data such as Registered Sex Offenders and associates via existing '*Subject Packets*,' additional secure law enforcement information that will be triggered if a person or vehicle are video captured by your existing camera system which instantly alerts law enforcement. Your banned gamblers, with information stored on them, can also trigger their presence before they enter your physical facility.

Radio communication is all well and good, but once the message is broadcast, it is gone and exceedingly fast in a tactical situation. The Smartphone when used has much more than audio to be shared; it has graphics, photographs, and video.

The heart of corporate communications is ***CCTV Command Center***, the operatives see it all and have access to search, rewind and witness incidents and their direct locations. These folks are more than your eyes and ears; they will inform all of the dangers, situations and the most effective escape routes from the incident and person. The event is not a drill, and you do not know the mind of a crazed gunman. Simply put, management and supervisor members of your team have administrative access to the solution, which you grant. All are now connected in the event of an emergency.

LENSS

Law Enforcement Network Sharing Solution

They are alerted and guided by your central operation, which works for hand in hand with management. Law enforcement is also informed on the outside of the facility and is even faster than a 911 call and dispatch informing officers.

Incidents take a life or death of their own. We call it '**Event Fluidity**,' it saves lives and negates failed '**Duty of Care**' issues.

What are both our Expectations?

- Security of patrons and employees
- Upfront checking of all that enter facilities, by all various means
- Use of secure databases that supply information relevant to your industry
- The dissemination of vital up-to-date information
- Shared within your corporate network or/and industry
- Logged inquiries by all
- Well coached and trained security team in usage and outcomes
- Support and updates
- 'One Stop Shop.'
