**LENS (Law Enforcement Network Sharing Solution) Is Not Analytics!
LENS Does Not Scrap Siloed, Dusty, Collected Information.
LENS is the Basis of Data/Information Collection for the Analysis.
*Real-Time Collected Data from Street Level Officers is the Actual Key!***

Analytics is only as good as the base data. Under or miss-reported data is the failure of collection that makes a mockery of the weightless and missed results.

The actions of sheriff deputies and police officers on the streets are the beginning of the information chain. They see and hear the initial incidents and subsequent conversations with the individuals. You cannot get closer to the facts than our law enforcement *'boots on the ground.'* In notating within **LENS** and not just robotically checking boxes, they are building an information flow with **unique identifiers** for all their fellow officers across borders, counties, and agencies.

You do not have to write a book; it is just short words, sentences, and phrases that become searchable for all. Law enforcement officers at all levels are trained and have *'soft skill sets'* that are based on gut feelings. Those must be noted, as they may and will play an important part in a further or a connected investigation down the road.

It is those *unique identifiers* such as, vehicle tag, driving license number, type of vehicle, passenger or passengers, location, time, and the reason for a traffic stop that just like a field interview or *'call for service'* highlight time-based facts and statements that must be noted. There is the difference and been proven over and over for the last three and half years in the use of **LENS**.

There is categorically no solution on the global, nationally or on a local basis that can share across borders and agencies in the manner of **LENS**. It is the law enforcement game changer and can be assimilated as productive ***'Policing on Steroids.'***

LENS

Law Enforcement Network Sharing Solution

LENSS (Law Enforcement Network Sharing Solution) platform works as a standalone RMS/CAD or can be integrated with your internal systems.

LENSS
Law Enforcement Network Sharing Solution
BY PERCEPTIVE INTELLIGENCE
"Every Officer should know what other Officers know"

The capability to onboard your total agency or force is in a simple single operation. It is a necessary, logical policing tool which increases the ability of all officers to assist each other and vastly improves the morale that we all know requires work.

The support and training are second to none as we believe in the 'train the trainer' principal.

The difference with **LENSS** is simple; it was logically designed by former law enforcement officers who work on the day to day operation with the software team. This is not a singular IT operation; we understand the streets, morale of officers and how to motivate all to physically participate in successful crime fighting.

LENSS is a CJIS secure, compliant cloud-based modular platform and is based on perpetual notation which is totally searchable. The query ability is exacting and really does offer officer safety in knowing so much more when interactions are occurring.

The **LENSS Currency Tracking Module** is the only global solution for tracking 'drug buy or organized crime funds' that you insert into society. If you are photocopying these funds and placing in a filing cabinet for checking later, you are a potential **LENSS** client!

The money laundering that is a major global issue is solvable through **LENSS**. Any street-level officer on the **LENSS Currency Tracking Module** can scan seized funds from their computer or Smartphone, if it is a match for uploaded currency, the officer whose case it is, will be notified instantaneously via SMS Text and Email. None of the case information is seen by the officer on the street.

Make an appointment; we will visit in person, converse and demonstrate the solution.

LENSS is the Needed & Demanded Change...

WE ARE IN THE NOW & KEEP YOU; IN THE KNOW...
