*LENSS Currency Tracking 'Real-Time' Network*

Let's Talk *LENSSOLOGY*!
Currency Tracking & Network Sharing Module

Most probably every street, highway, and freeway have narcotics and drug money traveling on them 24/7/365. Passing through rest stops, and small/major towns along the way, delivering their ill-gotten gains. When these criminals, dope dealers, and currency couriers are riding the streets, they are open and vulnerable to making mistakes whilst driving long distances, meaning they are exposed for a traffic stop and further investigation.

If a traffic stop is made and the amount of currency on the person or within the vehicle is suspect, what options do you have to record the currencies or compare them with known association to drug monies? You do not, you have no recorded idea of the monies on their person whatsoever.

Sure, there may be a paper record of copied notes from a previous seizure, which means a heck of a lot of time to track it down trying to verify. Who really goes back and checks those reams of paper with copied currency on them?

No one efficiently, you do not have the time or the manpower!

This is the digital age and yes, there are currency machines that can and will record serial numbers in seconds and then store the results in a data silo. These are far from readily available to be compared and certainly not available via a network to all officers on the streets and freeways.

We have radically changed that!

Not only changed the capabilities of knowing these currencies by the currency collator scanning each bill, recording their serial number, but through the **LENSS Currency Tracking Module**, placing that information in its simplest form in the hands of every single officer within your jurisdiction to clear or arrest the suspect.
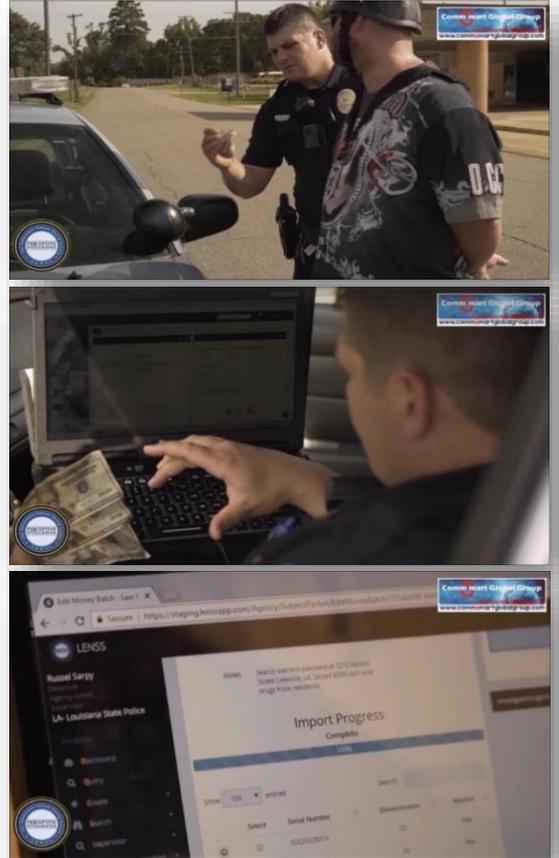

Now officers can manually enter currency serial numbers, the **LENSS Currency Tracking & Network Sharing Solution** does the rest in querying for a match. Officers can have a small version of the unit in vehicles to automatically scan currencies.

Every *State Public Safety Department* within their *Fusion Center* with its *Narcotics division* can now expand the network of officers, to literally every officer via any device to connect through **LENSS** and your State's database.

Seized, confiscated or suspect currency can now be recorded in mere seconds, allowing for all officers to have this information instantaneously, with ease to query the monies or currency at a traffic stop or a planned raid where known monies will be.

LENSS Currency Tracking machines are housed within various agencies/departments for ease of scanning seized or checking currency and logging for all to have access securely and query.

Using a CI to making buys with this recorded currency is a whole new world of really knowing, comparing and securing a conviction with evidence that is readily available. This is efficiency at its finest!

No more comparing photocopied currency and slaving over comparison tasks which take hours, if you ever actually have time to do so.

The efficiency factor is overwhelming and now that you are recording so much more currency it is populating the databases and increasing the opportunity to match currency, connecting with the illegal monies, the dealers, and drug/currency mules.

Take the **LENSS (Law Enforcement Network Sharing Solution)** approach and we shall show you so much more you can achieve with **LENSS Currency Tracking & Network Sharing Solution.** If you think this is mind-blowing, we have a lot more to talk about and change your capabilities!

We Are in the Now & Keep You; In the Know...
