

## Let's Talk **LENSSOLOGY** & **HIDTA!** Currency Tracking & Network Sharing Module

There is nothing more important to any law enforcement officer than safety. This can only occur when we have the correct information at our fingertips. In the first place, it has to be collected and readily available to all. Big data sadly is always stored in data silos and not accessible to those that require it in a timely or secure manner.

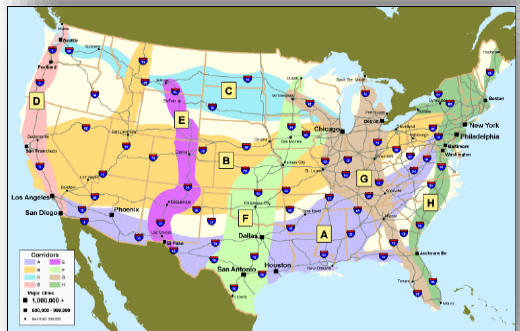

Drugs and money or if you like narcotics and currency go hand in hand. The efforts to reduce the drugs on the streets is a never-ending circle, which is fed from the start with currency. The money, the funding to start the transactions. The currency has to be in the right place to even start a narcotics transaction, the grower/processor, illicit drug manufacturers and the investment group. Pure business, with a difference, **it is all cash!**

Both drug and currency mules are crisscrossing the roads, motorways, and freeways of the global. Billions of currencies are traveling 24/7/365 and very open to being stopped by the highway patrol, sheriff's deputies and police officers. Right now, they have no way at the actual stop to know anything about the currency or anything about the driver or passengers past connections with law enforcement, unless there is a warrant or an issue that is suspicious.

University students and others are hired as onetime mules to courier these funds as they are clean with no criminal records, which makes it difficult to recognize. Due to the age of the students they believe they can go forever and drive whilst tired, making mistakes or using something to keep them awake, this is where they make the driving mistakes and open the door for law enforcement to enact a traffic stop.

If a traffic stop is made and the amount of currency on the person or within the vehicle is suspect, what options do you have to record the currencies or compare them with known association to drug monies? You do not, you have no recorded idea of the monies on their person whatsoever.

Sure, there may be a paper record of copied notes from a previous seizure available, which means a heck of a lot of time to track it down trying to verify. Who really goes back and checks those reams of paper with copied currency on them?

**No one efficiently, you do not have the time or the manpower!**

This is the digital age and yes, there are currency machines that can and will record serial numbers in seconds and then store the results in a data silo. These are far from readily available to be compared and certainly not available via a network to all officers on the streets and freeways.

**We have radically changed that!**

For organizations that are frontline in narcotics and have all fellow agencies working similar cases in the same manner are overseen by **HIDTA (High-Intensity Drug Trafficking Areas)** especially in deconfliction.

Processing deconfliction requests are central to the responsibility of HIDTA. Law enforcement officers conduct numerous events, such as surveillance, serving search warrants, and making undercover drug buys throughout the day in an effort to reduce drug trafficking and related crimes. As investigations progress, the targeted individuals may operate across multiple jurisdictions and have ties with other criminal groups or DTOs.

Event deconfliction help to ensure officer safety by notifying agencies of potential conflicts in enforcement actions taking place in close proximity to one another.

Now there is a major change in how all agencies can and will work together in the collection currency serial numbers, which is immediately uploaded into **LENSS Currency Tracking Module** and available to all law enforcement in the field across jurisdictions to clear or arrest the suspect.

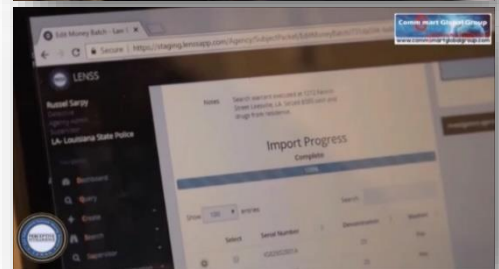

Now law enforcement can manually enter currency serial numbers, the **LENSS Currency Tracking & Network Sharing Solution** does the rest in querying for a match. They can have a small version of the unit in vehicles to automatically scan currencies.

Every *State Public Safety Department* within their *Fusion Center* with its *Narcotics division* can now expand the network of officers, to literally every officer via any device to connect through **LENSS** and your State's database.

Seized, confiscated or suspect currency can now be recorded in mere seconds, allowing for all officers to have this information instantaneously, with ease to query the monies or currency at a traffic stop or a planned raid where known monies will be.

**LENSS Currency Tracking machines** are housed within various agencies/departments for ease of scanning seized or checking currency and logging for all to have access securely and query.

Using a CI to making buys with this recorded currency is a whole new world of really knowing, comparing and securing a conviction with evidence that is readily available. This is efficiency at its finest!

No more comparing photocopied currency and slaving over comparison tasks which take hours, if you ever actually have time to do so.

The efficiency factor is overwhelming and now that you are recording so much more currency it is populating the databases and increasing the opportunity to match currency, connecting with the illegal monies, the dealers, and drug/currency mules.

Take the **LENSS (Law Enforcement Network Sharing Solution)** approach and we shall show you so much more you can achieve with **LENSS Currency Tracking & Network Sharing Solution**. If you think this is mind-blowing, we have a lot more to talk about and change your capabilities!
