Life is All About Missed Information, Lost Data...

How often have you said to yourself, *'if only I had known that?'* Current information saves time, money and frustration for us all. We stumble across information every single day in our lives that we think we will remember, but we do not! It so easy to forget, but even easier to remember when you make a simple note regarding the information.

In business, if we only made decisions with the full facts, look at how more successful we would all be, but we don't. Remembering facts makes us so much more productive. In this age of technology, there are so many ways to record information for retrieval, but it does not have to be difficult. It is about planning, preparation, memory, muscle memory if you like. Once you start and continue over a thirty-day period, it becomes a natural event.

Writing reports are the key, but most judge that it is not necessary information and move on with lost information that down the road could have been a factor that made the difference.

Law enforcement is the perfect example of lost data. On a *'call for service'* regarding a domestic dispute, you arrive and the couple have made up or in the process of doing so, the majority never write a thing down, just checkboxes, missing information of the demeanor of the individuals, their attire and attitude, even the car parked outside the house. All pointers that could be keys to the next *'call for service'*. Simple notes, not writing a novel, but key simple facts make a radical difference for the next officer who is called.

How do we know that these types of notes make the difference?

The state of Louisiana has been just doing this with over 90% of the police agencies, sharing their information across parish borders within the state. **LENS**, **Law Enforcement Network Sharing Solution platform** has been in operation for over three years in assisting officers to know much more than the normal way we glean information. We all use DMV and NCIC, but it is limited information that really does give the *'real'* facts.

Law Enforcement Network Sharing Solution

So, what does **LENSS** do that is completely different? Under a DMV search, it populates on one screen with all previous stop information from other officers who have 'touched' that vehicle tag. In turn, it notifies those officers via SMS text and/or Email that this vehicle has been stopped, the reason and that a DMV search has been enacted. This is a full safety factor for the officers with so much more information at their fingertips. This has never been achieved before for law enforcement globally.

To continue with this traffic stop, the officer now approaches the vehicle and asks for the driver's license. The check through NCIC is limited, but not with **LENSS**, the same principle applies. Each officer who has come in contact with the license information will now populate the screen, with far more information about the previous stops. It could include passenger information, statements made, attitude and a whole gambit of information you would have never known about if the officer had not made simple notes on those stops.

Now whole County Sheriff Deputies, City Police Officers are sharing information across borders and agencies which has never been achieved before. Not only a law enforcement officer safety factor on knowing so much and not walking into a dangerous situation, but it also solves crime faster.

LENSS is key for all facets, including **Investigative Alerts and BOLOs**. Imagine being able to send out a **BOLO** in under thirty-seconds to all officers who receive on either their Smartphone in-car laptop. For a robbery, with a clip of CCTV now in all officer's hands, there is nowhere to hide!

The importance of preserving data has never been so vital and with **LENSS**, it has taken information sharing capabilities to such whole new level. This not only protects the public but brings officer safety to what it should be.
