

Narcotics, The Undercover Hell-Hole That Demands More Connected Information **Reducing the Risk & Increasing the Resolvments with More Definitive Data in Real Time**

Narcotics do not just ruin users and dealers' lives, it deeply affects the police officer who chooses street clothes, the hidden badge and a lifestyle that is so abnormal, it ruins relationships, marriages and a normal life. They do this job because of the passion to do what is right and they passionately believe in it.

It has been stated that advances in technology, increased dire liability and budget limitations have caused many agencies to steer away from undercover actions and, in turn, these causes have put the once common practice on the endangered species list. We all know that narcotics are connected to the majority of crime and is the common link that cannot and must not be ignored.

If a police officer is considering undercover work in today's world, for any reason other than the greater good or truly wanting to be a part of a team, then he or she should seriously rethink the idea. The old PlayStation II slogan "**Live in your world, play in ours**" adequately sums up the life of the undercover officer. It is global undercover policing at its best but no one ever said being the best would be easy, until now!

A bold statement for bolder actions that are available to assist both street officers and undercover narcotics officers to be more informed in real time with safety in mind.

I found this pearl of wisdom, "*read the writing on the wall.*" If an agency appears to be working on a frail operating budget, plagued by internal drama, lacking regular training, and regularly inundated with highs and lows, the same infection will slowly fester in your undercover operation. A successful operation must always start with a professional department backing it with communications that are second to none and a team of fellow officers across the board knowing who is on the streets and sharing that information in real time.

If you want to join this elite, continuous maligned, questioned and treated as outcasts, then we have some changes in how you now have a whole different perspective of operations from your fellow officers.

Let me state this, you are not alone anymore.

Policing is in our DNA, our passion, so to speak. **CommSmart Global Group, a LexisNexis Risk Solutions Partner**, is the logical straight-talking global leader in digital policing.

Our global team comprises of former US Narcotics, FBI and London Metropolitan Police officers, with a background of understanding street crime, counter-terrorism, identity theft, fraud, narcotics, gang crimes, murder, cyber-terrorism, hacking, CCTV Facial Recognition and *Super Recognizer Facial Recognition* capabilities and services.

Policing today is not the policing of yesterday or of how Sir Robert Peel, back in 1829 visualized it would be. The [Nine Peelian Principles](#) are still as relevant today as they were when Peel dictated them back then. Sadly, the majority of officers and management have no idea what they are and stand for but they should. **Now we introduce the 10th Peelian Principle!**

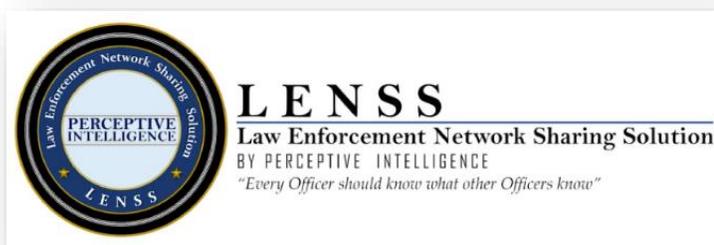

Predictive analysis and crime analytics, when combined with street-smart policing, it is a comprehensive community policing tool. We must remember that as Peel stated, '**The Police are the People and People are the Police**'. This must always be at the forefront of our minds.

The collection of crime data through reports is doing pretty well, but then it stops!

Sharing this data and analytics across borders, both county, city, state and nationally is missing in most locations globally.

Not with us, it is shared! Our ability to create the data trail with our access to over 69 billion public records with law enforcement through our partnered Accurint solutions is the key.

This is where **LENSS (Law Enforcement Network Sharing Solution)** is the revolution in communications and across border/agency information exchange. Now, the data that has sat in data silos collecting dust, is directly in the hands of the officers on the street, where it is desperately needed to protect their security and well-being, opening the previously hidden crime data allowing them to do their job securely and solve the crime.

Everything you require is encapsulated within **LENSS, DMV, NCIC, HIDTA, Safety Net, LPR, PNC, CRIMINT, Accurint local crime and public data with any other databases you wish to add from your existing databases.** As you action your normal verification process via **LENSS**, it accesses all these steps on one screen, smartphone, laptop, and PC Desktop, it works with all.

Within one operation, no additional programs to use, no more retyping names, vehicle tags or other vital information, right in the palm of the hand and at your fingertips.

It is the additional information that is significant, every report and importantly the previous **officer's on-the-spot notes** are matched in *real-time* and alert the current officer of every interaction the individual has had with law enforcement, from traffic stops to infractions, with important detail from those *notes* which will be compared and matched.

Now, with **LENSS**, there is a major team of previous officers who have had some interaction with this reported vehicle or individual that is now with this officer. They are all in communication instantaneously via email and SMS text generated automatically by **LENSS**. If back-up is required, all the current and past threads of information are in their hands also.

No one is walking in blind!

Checkboxes cannot do that. The simple visual ability, comments, location, associates are brought right to you. Preparing you for the true statements which have previously been stated to others. This is ensuring your safety as to who you really are encountering and speaking with.

From traffic stops, community incidents, domestic disturbance to warrant service. Officers now have so much more relevant data at their fingertips for the safety of all.

The *'weak link'* within drug dealing is as simple as paper, currency, those notes that pass among the buyers and sellers. Yes, cash, that is the heart of the illegal drug business. This is where digital and paper meet the road. Digital currency tracking wins over any other method you might have been or still using!

LENSS (Law Enforcement Network Sharing Solution) now brings you a proprietary, patented **LENSS Currency Tracking Module.**

Currency or Money is the root of all evil and **LENSS** will record and track the currency which is the **#1 tool** of the drug trade and cartels. Now, you have the ultimate answer that encompasses a solution that is the crime-fighting revolution.

No more photocopying of bills when preparing for an uncover buy or checking confiscated currency for a match by hand. It all happens through **LENSS**.

For the last two years plus **LENSS** has been in use in the USA successful and is now available globally. This networking of information is changing the basis issues of crime fighting on all fronts.

Contact us for more information for either an electronic web presentation, a symposium for you and your surrounding agencies or an appointment.

THAT IS THE PRACTICAL WORKING DIFFERENCE!

We Are in the Now & Keep You; In the Know...
