We Too Will Be in Orlando October 6-9, 2018 for the 125th IACP Annual Conference and Exposition

2018 is more important than ever in regard to all forms of communications and basic policing!

The basis of life is communication, even from the portrayal of the caveman and their strange sounding 'ughs and grunts'. Those sounds were an actual form of communication and they understood each other clearly.

Today we have moved forward, and improved our means of communications keeping each other informed.

Have we?

Policing has left behind the whistle, using telephones, radios, and Smartphones. That might be a great improvement for voice communications and even texting capabilities. The voice and our fingers and thumbs are not the only part of our skill-sets, what about data, reports, street information that never warrants a check-box or a simple report?

We ask the public to be more alert and ask them to '**See Something, Say Something**', which is still not anywhere near what we require for the safety of us all.

Why is it then, that policing is not using our own demands of '**See Something, Say Something**', informing each other from shift to shift, city to city, county to county, and state to state and even information in general?

Too much vital information is left at the roadside or when interviewing because it does not warrant a check-box or a simple report. ***It does not have to be this way at all.***

LENS (Law Enforcement Network Sharing Solution) Platform is more than unique in the true sense of the word, it is a revolution of connecting communications of real-time sharing globally. This five-year-old platform has walked, talked, saved lives, closed cases across agencies and borders and shown its worth in the State of Louisiana and beyond.

LENS

Law Enforcement Network Sharing Solution

Now, it is released for a global realization of true communications between unconnected agencies, departments, crossing all borders. Placing information in law enforcement's hands.

LENS is agnostic to your devices or mobile CAD, RMS or CAD systems. It even uses your personal Smartphones and complies with all rules and regulations, as it leaves *'nothing'* on that Smartphone whatsoever. It does not compromise the privacy of information that has been a concern for all. Every simple note you report is now shared securely with all officers.

So simple, you make a stop, enter the tag and the platform returns DMV information, plus every single previous stop of that vehicle with reported reasons, the officer who enacted the stop and why. It might have never been a report previously, it was just a 'feeling' the officer had, but it is in the notes, which are totally word searchable.

It goes further, even with the driver's license and checking NCIC. All who have touched that individual is reported in the thread. Now the previous officer's notes which you are reviewing is directly informed via an SMS Text message and/or email instantaneously, that you have stopped this same person. Through that connected data you can now communicate, as their email and Smartphone number is right there. That is the **LENS** (Law Enforcement Network Sharing Solution) Platform. This is just the tip of the **LENS** Iceberg of Communications.

We would like to introduce you to our **LENS** Currency Tracking Proprietary Platform which, **if you are photocopying your 'Drug Buy Funds', YOU are our client!**

Our **LENS** Currency Counting machine counts the bills, scans and records the serial numbers, saves an image, front and back of each bill and then places in an encrypted real-time database. When your CI or yourself go out to make a drug buy, the bills are now in the hands of the drug dealers and will find their way back to the source. Once they are on the streets, they are now yours! Make a stop and if the individual has currency on them, you can run the currency via your MDT or a Smartphone through the real-time database. Finding a match will inform the originator of the uploaded currency and inform them instantaneously via SMS Text message and/or email.

This is a force multiplier for your direct agency and adjoining departments. Uniformed officers have this ability to check currency which changes morale, attitude and a sense of satisfaction in solving crimes that use to pass you by. Your department is now a field of opportunity to be productive regarding time and effort, which saves the eroding budget.

Contact us to meet up at IACP, click here for more information and set up a short meeting with a five-minute demonstration of our revolutionary LENS opportunity.

LENS is the Change...
