## **LENS (Law Enforcement Network Sharing Solution)**

### **PLEASE NOTE!**

Without information, we are at a standstill. If you do not notate regarding what you are doing, Doctors could not function, we would know nothing about history, there would be no books, and there would be no such thing as 'order takers.' It is impossible to place everything in your mind and be able to have good recollection.

Law enforcement, in the original days, had their daily inspection with a notebook, whistle, and truncheon for review. Seems archaic, but without writing down the event, there could be no solid information for the courtroom.

The power of the ubiquitous pen and paper is still with us, but now a digital means. It is a world of laptops, tablets, and Smartphones with the ability not to be tethered to a cord. Recording of information and recall has changed!

**LENS (Law Enforcement Network Sharing Solution)** has taken what we acquired for granted to a level of '*real-time*' event management that was never expected, but logically right in front of our eyes and in our hands.

Law Enforcement Network Sharing Solution

Making notes is part of life, look how often you jot something down as a reminder, stick a note on the refrigerator or leave that note on the table. We all have a packet of 'sticky notes,' somewhere if we could only find them!

**LENSS** is the most powerful law enforcement tool ever invented, but only if you use it every single time. This just takes practice and seeing the results on a daily basis within your agency and across borders proves this. Never has there been such a collaborative search engine in the hands of all law enforcement.

Sure, *DMV* and *NCIC* bring you standard information, it is not everything by any means that you should or could know and is at a stage of necessary revision in this technological digital day and age.

In using **LENSS**, you are connected to all other officer's information they have recorded as '**notes**,' being stated from previous stops or connections with vehicles, individuals, events, addresses or calls for service. In turn, the event you are now in is reported back to those officers in '**real-time**' via SMS Text/Email. Yes, that connected and that instantaneously. They now can assist you with more information of what they know on the subject at hand.

This information is created in a '**Subject Packet**,' which is likened to a 3" x 5" postcard which is then formed into collated searchable or queried thread. Believe it or not in the 1970's this is how we gather intelligence which was then filed into metal cabinets. Yes, that old, but with today's technology is available in '**real-time**' with information at our fingertips.

'**Subject Packets**' explain so much in their short note form. The officer's understanding of the moment, words, observations, locations, associations, importantly, their '*gut feeling*,' all recorded for others to see which is a major safety factor to all.

This is shared information across borders and agencies. No more '*go fish*' for information, it is at your fingers stored in the CJIS compliant cloud, available to all who have administrative access on any Internet-connected device. The '**Subject Packet**' which is short, decisive and to the point brings important information to the forefront without writing a novel. It is a morale booster to all officers. Some, in the beginning, do not buy into change, this massive change saves lives, solves crimes and is a team builder of major proportions. In fact, it is a '**Force Multiplier**' which in these days of budget cuts, is absolutely necessary.

Officers are not all the same; we know this so well, some will go beyond the call of duty and want more from the service job than just being an important street cop.

Law Enforcement Network Sharing Solution

Technology brings us all together, linking information, especially those that have mastered the Smartphone who can have the advantage, but we can all catch-up with a device we all use every single day and will feel and see the strong results.

Those that just do the basics soon learn the attributes of the '**LENSS Subject Packet Notes**' and how they can more than assist in policing today.

Knowledge is King, words, the written word, which is documented and sharable makes a vast difference. It is not just the traffic stop, with **LENSS**, you get all the DMV information and all other vital information from officers who previously stopped that vehicle. Yes, that deep and protective! Information that *DMV* has no earthly idea about. It is so important that you know as much information as possible in any traffic stop and we all know why! This is now a shared stop with all previous officers in the loop in '*real-time*.'

It is not just *DMV*, think about *NCIC* and all the information you now have at hand, not just about the driver from his license, his address, reason for previous encounters, who else was in the car and importantly written, searchable notes on what he or she told you.

Never has there been a solution for law enforcement globally. This is policing on steroids with a solid outcome for cost-effective safety and solvability.
