

## Practical, Real-Time, Life Saving Cross Agency Shared Crime Data at Officers Fingertips

Not having current and up-to-date information in law enforcement is a killer! Knowledge of what you are walking into for a 'call for service' has never been so vital in our increasingly violent society. Police officers are frontline and are called upon to resolve and solve individual's businesses and community's issues in regard to criminal acts or disputes.

Here is the issue, law enforcement databases, all, in fact, local department, county, state, and Federal are so disjointed, disconnected, not shared and hidden in data silos, which is costing an inordinate amount of time, depleting the reduced budget, frustration and placing officer safety at an even deeper risk. Most departments have such outdated computer technology and hardware, they don't have the budget for necessary upgrades.

The 18,000+ law enforcement agencies in America and the 43 main police constabularies, plus lesser known smaller agencies within the United Kingdom are all going in different directions trying catch up with technology which will advance crime solving. Having a myriad of mobile apps and individual forces spending and wasting their exhausted budgets on technology research and not being on the same page is not going to solve the compounding issue.

The ideal solution is '**one-stop shopping**', so to speak, one screen, one solution with access to all databases and real-time information. *That would be too perfect, would it not?*

Well since 1993 that exact solution was created, available, in use, with crime analytics, predictive analysis and now with 'live' real-time information sharing across agencies. It has grown today to a crime-fighting solution from **CommSmart Global Group, a LexisNexis Risk Solutions Partner**.

**LENSS** (Law Enforcement Network Shared Solution) which encompasses all demanded databases every time you access information. All within one operation, no additional programs to use, no more retyping names, vehicles tag or other vital information, right in the palm of the hand.

The major difference is that all checked information from a traffic stop, crime report, criminal charge or a stop & frisk is of course reviewed, it is the officer notes that make a radical difference. *The words of the officer are key*. Those little noted visual nuisances or additional digital images are a trigger and are highlighted.

Where **LENSS** is so vastly different, **LENSS** is your key as your gateway to all available databases, such as *DMV, NCIC, PNC, CRIMINT* etc. As the officer opens this new inquiry it now also informs the officer of all information and protective issues. It also informs any officer who via their report filing and notes input, making this inquiry of a person, vehicle or incident instantaneously sending via email and or SMS text to any officer who has filed a report or made an arrest of this individual or incident. They now can join in this potential situation and protect the officer on this call and potentially solve their outstanding crime also. This is across all agencies and borders, not just in a single agency.

**THAT IS THE PRACTICAL WORKING DIFFERENCE!**
