

Share Critical Data, in Real-time, Across Jurisdictional Boundaries

CommSmart Global Group, a LexisNexis Risk Solutions Partner, introduces to you, **LENSS (Law Enforcement Network Sharing Solution)**. Some history might assist you with facts why it is the **only** cross-border *instantaneous* intelligence sharing solution globally. As you know we must be reminded of history and why we use certain aspects of prior reasoning.

Knowledge which is collected, documented information saves Police Officers lives and solves crime expeditiously and cost-effectively.

The *index card* to some is so old school you might have forgotten about. In 1883, the **London Metropolitan Police** knew the power of that *index card* and how useful it was. For decades it was used in all law enforcement and was the key to documented policing prior to any police computer system. It wasn't until 1960 that someone realized how powerful that index card was.

So many index cards were being created they required a collator, a civilian, who created usable information feeding the incident room with current information.

Here is how history shows us:

Meanwhile, the two collators per Division were to record and index 'all items, however insignificant' and ensure they were passed on as appropriate. The collators would maintain a series of indices, for example, regarding vehicles, modus operandi, and 'Beat-Street' - this last containing all information known regarding all addresses on the Beat. The core was the Intelligence Index containing details of 'all local criminals or persons suspected of being active in crime', not surprisingly, but also 'details of all persons who have come to notice'

Simple index cards created for and by officers to assist all with their department.

Collated Index cards were used to document information in the assassination of JFK.

Index cards have played such an important role in crime fighting that is why in the creation of **LENSS (Law Enforcement Network Sharing Solution)** it has been so successful in sharing cross-border information, which allows officers to be better prepared and protected.

Today, cross-border crime information sharing was non-existent until now! Yes, proactive police department tools that are agnostic to what devices it can be used on.

Shared Indexed Information via 'Subject Packets' Is More Than the Key!

Firstly, what is a 'Subject Packet'? it is a digital means to collate all information regarding individuals of interest, arrestees, incidents, traffic stops, Field Interview Reports, Stop & Frisk Information etc. This is then digitally sharable instantaneously with others who have collectively filed individual reports that match information/data within the existing filed indexed information. Sharing is a cross-border protocol, meaning all, even globally if administratively required.

Information or the storing of information, has always been an issue. In policing we *live or die* on facts, facts that have been written down at the time of the incident or arrest and then being able to refer to them for the completion of the case. Most times, they are filed away and will never see the light of day until someone *goes fishing*, which takes time and draws frustration. This is so negative to not allow this information availability to others, it will save lives and protect officers who now know who they are speaking with, their background and real name. So much more than is available in the majority of agencies today.

Where have we gone wrong? Placing information in silos and not allowing others to see vital information is nonsensical, is it not? It hampers the solving of the crime and is costing an inordinate amount of the depleted budget, which you can ill afford!

CommSmart Global Group, a LexisNexis Risk Solutions Partner, is not an outside enterprise that does not have previous and up-to-date working knowledge of global policing. Our ability to look in from the outside with logical business practices, fully understanding the inner workings of law enforcement agencies is second to none. Our team in the majority are former law enforcement personnel, working in street crime, narcotics, gangs, fraud, counter-terrorism with major agencies globally, and the FBI.

The challenges have been exacerbated by budget reductions at a time they are desperately needed and spent wisely. Proactivity is so necessary and will be achieved with valuable collected data/information being made available, securely to officers, right to the palm of their hand, either their Smartphone, Tablet or Laptop computer.

LENSS is a proven success which is affordable and installable without time constraints. This is the **law enforcement revolution** you have been seeking. Have your law enforcement agency speak with us and request a digital demonstration.

If you wish a full Digital Policing Symposium for you and your surrounding agencies, let's do it!

Take a look at more information

There a series of videos that will show you just some of the success and uses of LENSS.

Do Not Let Another Day Go By Without Investigating How You Can Radically Improve Your Knowledge!

- REVOLUTIONIZE YOUR:
- ❖ COMMUNICATIONS
 - ❖ SAFETY OF OFFICERS
 - ❖ SUCCESSFUL CONCLUSIONS OF CASES
 - ❖ POSITIVE BUDGET RESPONSE
 - ❖ PROACTIVE EFFECT ON ALL
