

Simple Written Notes Shared, Make A Radical Difference For Officer Safety & Crime Solving Across All Borders/Agencies

In all Public Safety information and communications are the key to successful outcomes. It is that vital that this information/data is shared to protect all. You would think that that would foremost action in all agencies. ***Sadly, it is not!***

Just like you believed every piece of luggage placed on an aircraft was scanned prior to being placed on board. We found out that was not the truth when the aircraft was blown apart. The 1988 Lockerbie Bombing of Pan Am Flight 103, a Pan Am Boeing 747 informed us that no luggage was scanned whatsoever on any aircraft globally.

Lessons learned and methods changed make a radical difference!

A **police notebook, pocket notebook** or **PNB** is a notebook used by police officers in the United Kingdom to officially record details and incidents while on patrol. Its use is controlled by a number of guidelines, as information entered into an officer's PNB is admissible in court, and the

officer will use it to refresh his memory while giving evidence, and to support his statement. The USA has a similar structure.

Not all police officers are required to use PNBs; those in administrative roles (aside from those working in offices open to public inquiries) are not required to maintain them. Nor are officers working on custody stations, or those involved in training. Intelligence officers, control room staff, and officers who hold the rank of Superintendent or Chief Superintendent are all exempt from maintaining a PNB.

Why? Their information is just as vital as the street or patrol offer, detective, traffic officer, and community officer, is it not?

Form filling and checking boxes is a part of the collection of information, the individual notes are key, as they reflect comments at the time. Descriptions of objects, clothing, tattoos, vehicles, partially tag number, other people who were at the scene, they all must be noted.

If the individual or type of incident happens or is a suspect, the notes recorded at this time are now automatically matched with previous information. This is **LENSS (Law Enforcement Network Sharing Solutions)**. Sharing all the information across borders, departments, and agencies, making officer safety a priority as it should be and allowing investigations to take a whole new approach, which should have been here all along.

This is the connection that has been missing since the inception of policing by Sir Robert Peel, in 1829. Peel's **Nine Peelian Principles**, the **Policeman's Bible** now has the **Tenth Principle**, a *Perceptive Intelligence*, **LENSS** (Law Enforcement Network Sharing Solution). Truly a massive critical improvement necessary for the social/criminal situations of today and also previously really required.

We have all used **Index Cards** which believe it or not have played such an important role in crime fighting that is why in the creation of **LENSS (Law Enforcement Network Sharing Solution)** it has been so successful in sharing cross-border information, which allows officers to be better prepared and protected.

Today, cross-border crime information sharing was non-existent until now! Yes, proactive police department tools that are agnostic to what devices it can be used on.

It is important to show why this is so significant. Let us use one agency that we all know of and heard of, the London Metropolitan Police. Like all agencies, they have communications via radio, mobile phone, and laptop computer. Each time an incident occurs, the information is received via 999 or from another officer, this goes through a dispatch system and is the same as used by all global agencies. Once the officer or officers are dispatched, they now require intelligence or Intel, this is garnered not from dispatch but by a separate support channel. Yes, another connection is required, they will supply intel to the officers, not always in a timely fashion which leaves those responding basically open for issues once arriving at the scene or incident.

On July 7th, 2018 it was reported and confirmed by working Metropolitan Police Officers that due to lack of personnel the support channel was shut down. Meaning that all dispatched calls sent to officers left them blind, without any intel whatsoever. *Draw your own conclusion!*

This will not occur when using **LENSS (Law Enforcement Network Sharing Solution)**, through all of the connection via RMS & CAD using local and national crime data, which has been filed and securely accessible by all, you now know all about the individuals, locations, and connections. These index cards are simply '*Subject Packets*' containing the major thread of all filed information with officer's notes which are totally searchable.

LENSS is a Law Enforcement Networking System

LENSS facilitates real time communication as officers are engaging criminal activity

LENSS enables data driven decisions

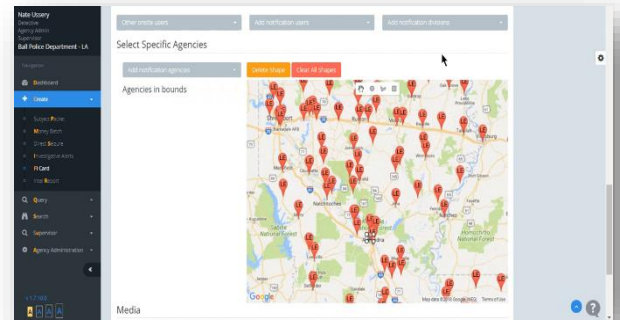

LENSS enhances officer safety and public safety

LENSS engages the patrol officer

Through **LENSS**, previous officers who filed information on the individual or with a situation match, they too are informed by SMS text and email. There is now so much background on the incident and its connections, all are fully up to speed without having to use any other person or support channel system. The previous officers can communicate if need be by mobile phone for confirmation. This is protecting the responding officers that are so necessary for today.

Shared Indexed Information via 'Subject Packets' Is More Than the Key!

Firstly, what is a '**Subject Packet**'? it is a digital means to collate all information regarding individuals of interest, arrestees, incidents, traffic stops, Field Interview Reports, Stop & Frisk Information etc. This is then digitally sharable instantaneously with others who have collectively filed individual reports that match information/data within the existing filed indexed information. Sharing is a **cross-border protocol**, meaning all, even globally if administratively required.

Information or the storing of information, has always been an issue. In policing we *live or die* on facts, facts that have been written down at the time of the incident or arrest and then being able to refer to them for the completion of the case. Most times, they are filed away and will never see the light of day until someone *goes fishing*, which takes time and draws frustration. This is so negative to not allow this information availability to others, it will save lives and protect officers who now know who they are speaking with, their background and real name. So much more than is available in the majority of agencies today.

Where have we gone wrong? Placing information in silos and not allowing others to see vital information is nonsensical, *is it not?* It hampers the solving of the crime and is costing an inordinate amount of the depleted budget, which you can ill afford!

CommSmart Global Group, a LexisNexis Risk Solutions Partner, is not an outside enterprise that does not have previous and up-to-date working knowledge of global policing. Our ability to look in from the outside with logical business practices, fully understanding the inner workings of law enforcement agencies is second to none. Our team in the majority are former law enforcement personnel, working in street crime, narcotics, gangs, fraud, counter-terrorism with major agencies globally, and the FBI.

The challenges have been exacerbated by budget reductions at a time they are desperately needed and spent wisely. Proactivity is so necessary and will be achieved with valuable collected data/information being made available, securely to officers, right to the palm of their hand, either their Smartphone, Tablet or Laptop computer.

LENSS is a proven success which is affordable and installable without time constraints. This is the **law enforcement revolution** you have been seeking. Have your law enforcement agency speak with us and request a digital demonstration.

If you wish a full Digital Policing Symposium for you and your surrounding agencies, let's do it!

[Take a look at more information](#)

There a series of videos that will show you just some of the success and uses of LENSS.

Do Not Let Another Day Go By Without Investigating How You Can Radically Improve Your Knowledge!

WE ARE IN THE NOW & KEEP YOU; IN THE KNOW...

REVOLUTIONIZE YOUR:

- ⊕ COMMUNICATIONS
- ⊕ SAFETY OF OFFICERS
- ⊕ SUCCESSFUL CONCLUSIONS OF CASES
- ⊕ POSITIVE BUDGET RESPONSE
- ⊕ PROACTIVE EFFECT ON ALL
