

Your Smartphone Is your Friend & Companion

Just like friends and family, there are always *annoyances, frustrations, and downright issues!* On the *bright side*, the ability for communications right in the palm of your hand outweighs all. The majority of us use the Smartphone for a lot more:

Emails Texting Social media Searching the web Listening to music Taking photographs	Shopping lists Shooting video Games for you and the kids Watching television programming Finding directions & using maps Applications, both business and personal use
--	--

Setting up the internal workings of a Smartphone is not always as simple as it seems but two definite items to have switched on at all times on either an Android or Apples based Smartphones are:

Location services

Bluetooth

This opens a whole new world of useful information which is in the atmosphere, it is all nearby you, with **offers, coupons, discounts and incredible information** when you are at an *event or museum, zoo or botanical gardens*. Even the *local supermarket* will offer you great saving via their **ProxComm Coupon/Discount Zone**.

Who doesn't want to save money?
